Thanks Chris,

Yep, I definately need to bring the code up to date...

PCR Pro started out just for the PCR-1000 5 years ago and then after
creating TrunkPCR, this one got put on hold.
I've been updating the code now and then, but still a bunch more still
needs to be changed.

Hopefully, I can get back to this with-in this next week...
I'll have this issue fixed, plus a few more options added.

Regards,
Jay

5. PCR Pro Update

Yahoo group: PcrPro
Date: 2007-12-06 01:26:40 UTC
From: Jay
Topic: 5 Message: 5

Hi All,

The next version of PCR Pro should be finished in another week I think...

Instead of patching all of the existing code to support ALL PCR's, I've
moved the code from TrunkPCR to PCR Pro and am in the process of adapting
the code to PCR Pro's interface.
I am also adding support to control the PCR-2500's SUB Receiver.
Also, I will be including the Sweep Display in both receivers...

Regards,
Jay

Jay,

Please let me know how you will be doing the $$ thing so i can get
some to you for all of your hard work in getting this done. My hope is
that between PCR Pro and TrunkPCR i wont have to use anything else for
my PCR2500 and PCR1000. (running on XP on a Mac Pro)

Thanks again

The transplant is coming along nicely :)
Patient is doing well and growing stronger every day...

Should be out before X-Mas, it's talking a bit longer than anticipated.

The current version on the homepage, everyone should be using, has the
Donation feature working..

Regards,
Jay

Hey Chris,

Work is still in progress...
I think I have the main interface complete, just need to update/complete
the SUB Receiver support for the PCR-2500.
All of the functions will be given a complete run through before I release
it, so I don't leave something out :)

Regards,
Jay

Hey Chris,

When I get the sub receiver portion finished for the 2500 and double check
that all of the functions work properly.
I've been recoding some of the old code of PCR Pro to make it run a bit
beter, changed the interface a bit by adding features for the 1500/2500.
Plus adding the Spectrum Sweep function too...

It's taken a bit longer than anticipated, I know... But it will take a bit
longer to get it up to speed.
When I have it ready, you'll alll know about it :)

Regards,
Jay

Hey All,

Just a further note on the status update.
I came down with the flu bug on the 18th and it's been kicking my butt.
The main symptoms have subsided 4 days ago, but I'm still getting dizzy
standing up too long or trying to concentrate on reading what's on the
monitor after 10 minutes or so.
I can get some work done now and then, but for the most part, it will be a
slow process catching up...
I'll keep ya updated on when it's getting close to being released...

Regards,
Jay

Hi Glenn,

I'll have to take a look at that. I may be opening the file with both read and write properties.
Right click on the mch file tyou are trying to import and check it's attributes.
If the Read-Only checkbox is checked, then uncheck it for now and try again.
If that is the problem, I'll change it to read only...

Hi Paul,

Try this:
Open PCRPro.ini in Notepad and change the ComPort entry under "[Settings]"
to the COM Port that is set for your USB Device.
Then run the program and see what happens.

I just checked this on my XP PC and my Serial to USB adapter works fine up
to COM16 (The Max allowed by the MS COM Control)...

If after you change the COM Port and it's giving you an error, let me
know...

Thanks,
Jay

Hi Jay,

I made the change in Notepad as you suggested. I'm still getting the error message "Radio not responding. Please check COM Port Setting, Power and Cables, Then try again..."

Thanks,
Paul

From: Ron M Chandler
Topic: 34 Message: 34

Do you have to donate to get the various buttons for settings and help menus? I'm a Trunk PCR user and got the download key. Enjoy using the program but can't access the former buttons for settings, etc, with this version.

Hi Ron,

Which former button are you referring to?
And No, being a Donating User, Doesn't Activate ANY Buttons. Only limits are affected...

For PCR Pro's key file, just copy the TrunkPCR.key to the PCR Pro Folder and rename to PcrPro.key...

Regards,
Jay

Jay, its the "Setup" and "Advanced" buttons that are missing. These include the Aduio, Com port, Record, Mixer, Search,Menu, Tune, EEprom, Record, Scope, Monitor, and Analyze buttons. I'm sure you have another way to get to these features in the new version, I just haven't figured it out yet. Thanks.

38. How can the program make the difference.

Yahoo group: PcrPro
Date: 2008-02-18 15:57:40 UTC
From: Glenn Blum
Topic: 38 Message: 38

I have a question, How does the program make the difference in the scanning sensitivity of the radio? I would think it should not.
I had tried two other programs with my PCR1000 and noticed that both PCRPRO and TRUNKPCR show more hits in conventional scanning mode. While Scanstar spectrum dominator (15 day trial) and an older copy of SCANCAT did NOT show much performance.

Glenn

40. can't get past first base

Yahoo group: PcrPro
Date: 2008-03-04 11:15:56 UTC
From: radiotronicgizmo
Topic: 40 Message: 40

i loaded the program - 3 times with the startup, the main,
accessories, loaded the upgrdae/patch.

it won't see or drive the pcr2500 -- it is on port 8 .. when i select
port 8 on the program the 'accept' button does not get enabled, and
nothing works. cant turn the radio on.

icom stuff works fine with it on port 8.

what next?

Hi Jay,
I sent you a mail earlier direct from the site but since then have downloaded the latest program for the 1500 plus the update. Started to learn it about 2 hours ago and now when opening up I get "Run-time error'9':Subscript out of range" As soon as I OK this the opening splash screen disappears. Any ideas please? I have other queries but these can wait. Do I get a password or key? I have registered and paid the initial fee.
Best wishes,
Peter

Hi Peter,

Yep, I just replied about your registration info...

Did you edit the PcrPro.inio file?
I haven't seen this kind of error in PCR Pro in a long time...
While the splash window is open and is displaying info during the loading process, does it get to the "All Done" section or does it stop before then?

Thnaks,
Jay

Hi Jay,

Thanks for the reply - I have re-sent the registration form and hope this is OK. I have since uninstalled and re-installed and the program seems to run OK.

Can you tell me about the fees? I see that there is an upper limit of 500 "searches" Does this mean 500 scans? If so I might have a problem because the whole idea of using PC Pro is to search continuously on my banks of frequencies for a series of signals which are unscheduled and can occur at any time of day from midnight through the full 24 hours. The probability is that I would do at least 4/5 scans a day so the upper limit would curtail the activity quite severely. What can you suggest?

Best wishes,

Peter

Hi Peter,

The 500 (or less) Search Results Limit is used when you search frequencies using the Search Banks.
When doing a search and the radio stops on a frequency, this counts as One (1) Search Result. It will save up to 500 results when searching a range of frequencies...

I am in the process of changing this to skip known frequencies (Freqs already stored in the scan banks) to reduce the amount hits saved in the search.

I have searched the 400 mhz range out here and yet to have found more than 200 active freqs, birdies or intereference in an 8 hour period. But of course your results may vary...

Regards,
Jay

Hello again Jay,

Sorry to be a pain - but all OK so far and thanks for the details about scanning rates etc.

Two queries:

1. Do you have a help file. The one in Menu takes me to the PcrProHelp.html but will go no futher.
2. The scan only seems to work channel by channel one at a time every time I click on the appropriate arrow. Is there no auto-scane facility where the channel moves up after a pre-set delay?

Best wishes,

Peter

Hi Peter,

When you install PCR Pro on your main pc, the key file from the laptop
won't work.
Just send me the Registration Info from that pc and I'll send you a new key
file...
I allow 3 keys per user, for three of the user's own pc's...

HI and thanks for the contact. I bought a PCR 1500 back in October and have been trying to find some decent software for it ever since. Icom's seems very limited and TalkPCR is OK but seems to have a bug. PCRPro looks just the ticket but I am having some problems in getting the scan to work as I want it. I don't think there are any instructions or manuals to go with this software and Jay seems reluctant to help in detail although on the short topics is very good. So I thought if there were any members in the UK who know this software, I could possibly look to them for some advice either by phone or mail.

Could you put up with a few questions until I have mastered it?

Best wishes,

Peter

Jay, thanks for coming back to me. I had not intended to be critical and understand that development of this type of software is inevitably time consuming on your part. I do want to use PCR Pro as it really offers what I need. However I do find some inconsistencies in the scanning. Exactly how should I initiate the scan and are there any critical settings that should be applied? I find that starting the scan by clicking on the scan button does not always start and sometimes even hangs or I get a "not responding" window. Can you point me in the right direction? Are there any written instructions or manuals anywhere?

From: Jay
Topic: 53 Message: 53

Hi Peter,

In order for the scan to work, a few conditions must be met first.
1) The Bank's Scan Button must be Pushed-In.
2) For every Channel in the Bank that you want to scan, the Channel's Scan Button must be Pushed-In.
3) The Squelch Knob must adjusted to Close The Squelch (No Sound Heard).

When the above settings are set, Click the Main Scan Button and you should be scanning.

If it's not working this way for you, let me know...

There isn't any help manual yet, just what's on the Help Page (When Started!)

If anyone has a question of the operation of the program, Just Ask Here First!!!

Regards,
Jay

Good morning Jay,

Thanks for the reply. I now see that the squelch adjustment is involved and have the unit scanning OK right now. Thanks for the advice.

I am sure there will be other queries but for now thanks and I will enjoy seeing what this little baby can do!

To: PcrPro@yahoogroups.com
Subject: Re: [PcrPro] Re: Scan Function (was UK Members)

Hi Peter,

In order for the scan to work, a few conditions must be met first.

1) The Bank's Scan Button must be Pushed-In.

2) For every Channel in the Bank that you want to scan, the Channel's Scan Button must be Pushed-In.

3) The Squelch Knob must adjusted to Close The Squelch (No Sound Heard).

When the above settings are set, Click the Main Scan Button and you should be scanning.

If it's not working this way for you, let me know...

There isn't any help manual yet, just what's on the Help Page (When Started!)

If anyone has a question of the operation of the program, Just Ask Here First!!!

Regards,

Jay

Jay, thanks for coming back to me. I had not intended to be critical and understand that development of this type of software is inevitably time consuming on your part. I do want to use PCR Pro as it really offers what I need. However I do find some inconsistencies in the scanning. Exactly how should I initiate the scan and are there any critical settings that should be applied? I find that starting the scan by clicking on the scan button does not always start and sometimes even hangs or I get a "not responding" window. Can you point me in the right direction? Are there any written instructions or manuals anywhere?

OK Jay,

Scanning now great and seems to be working 100%

Next question, I have an external Sound Blaster Card which allows me to use all sound programs on my PC such as Itunes, Windows Media player etc but I can get no sound from the radio, only from its own speaker. With the original ICOM software you could switch between PC and Radio - how is this achieved with PC PRO?

Grateful for advice,

Peter

Hi Creig,

If you're using the version in the file section, it should work ok.
Which version of Vista are you using?
While the program is loading and displaying the progress as it loads, does it get to the "All Done" message in the list or can you tell me what entry is displayed before it shuts down?

Thanks,
Jay

Hi Peter,

To listen to the PCR-1500/2500 USB Audio, Click the Menu Button and select Options->Volume / Mixer Settings.
In the Mixer controls Window, Click the Options Menu -> Properties and select the USB Audio in the Mixer Device list.
Adjust your settings here... If all is correct, you should be hearing the PCR through your Sound Card...

Jay, I am puzzled!

I have been importing *.fql files this morning and as they were finally saved in PCRPro I ran them to check on the scanning and the first 8 files seemed OK. I switched off, took a break for lunch and came back to it only to find that the previous settings for volume, IF shift, mode have changed and in the case of several banks only the first channel has the settings unchanged. I attach an original fql file for reference. Can you give me any idea what has happened here?

Thanks,

Peter

Hi Creig,

Are you using the program in the file section of this group?
If your COM Port for the radio is above COM16, then that would be a
problem...

If the PcrPro.ini file was made you can edit the COM Port in Notepad and try
again.
If the ini file wasn't created in the install folder, then you can
cut-n-paste the following lines in notepad and save it as PcrPro.ini...

------ Copy The Text Below This Line -----------
[Settings]
CommPort=2
------ Copy The Text Above This Line -----------

Change the COM Port to match what you have it set for in the Control Panel's
Hardware Device Manager.
If the COM Port is set above 16, then you will have to modify it...

OK. Now progressing in the right direction. I am importing fql files which were originally created in Excel and most go in without problems. However if I need to edit any file it is a bit of a long winded process to edit settings (Open in Excel, Edit, Save as CSV, change csv to fql, then re-import.) Am I missing something or is there a way to edit within PCR Pro?

Hi Peter,

The only support for talkpcr's fql files is in the Import Bank function.

Why are you editing files? You can Add Banks & Channels under the Edit Menu.

You also have the ability to Import channels using the RadioReference.com Web Import feature.
Another way to import Banks or Channels is to use the Frequency Search under the Help Menu, that takes you to Percoms Frequency database, where you can save your searches as Icom PCR-1000 MCH files. Then you just have to Import the Icom Files...

Jay

Hi Jay,

Not too sure. I re checked and corrected all the fql files then popped them back into the PCR and lo and behold all ran fine, so I'm not too sure what caused the skipping. Anyway the system is now running fine and no problems so lets call it user error.

I now want to set about learning the rest of the program. One thing that I don't understand is when I click on Sound record I get a window "Couldn't get wavein meter", then click OK up comes "Couldn't get waveout meter", click OK again and up comes the recorder window. Click on record and it runs OK and I can play back the file but the meters do not respond in either case. Is there something I am missing? Also are there any plans to introduce a timer connected to the recorder?

Have a good Easter break,

Peter

Hi Peter,

The messages, "Couldn't get WaveIn/WaveOut Meter" means that your sound card doesn't support the "Level Meter" option like SoundBlaster does. Since those features are not support, the VU Meters won't work.

I have a change in the works, so the meters are not displayed if the sound card doesn't support that feature...

The new Sound Recorder routines I'm working on correct that. They also have a timed recorder feature that will let you record a channel at a specified date, time and duration...

Regards,
Jay

71. Excellent program

Yahoo group: PcrPro
Date: 2008-03-29 12:00:51 UTC
From: Peter
Topic: 71 Message: 71

Jay Hi!

Just had to let you know that I am now running your software on a daily basis and scanning all my frequencies, and that I am delighted with the program. It really is a belter and is so much better than ICOM's own piece of stuff and also infinitely better TalkPCR. I will follow the development with interest.

Some questions:
1. You mentioned somewhere about a change to the recorder program and that it would be linked to a timer. Would it also be possible to indicate on which frequency a recording was made. As I am continuosly scanning up to 100 frequencies in a go it is a very laborious business trying to not only find the piece of recoring I need but also to link it to a frequency.

2. Do you also plan to enable the software to be progammed to stop and start at planned times on planned frequencies?

The only thing I find annoying is if I inadvertently press search instead of scan and then hold the program sometimes freezes necessitating a restart - not a major problem- but annoying.
Best wishes,
Peter

Topic: 71 Message: 73

Hi Peter,

Yes, when the timed recorder is finished, the filename will reflect the Bank,Channel & frequency.

The Timed Recorder will deactivate a Frequency Search/ Channel Scan when a Timed Event has met the Recording Date/Time, Day-Of Week/Time setting. The recorder will not save a recording during a frequency search / channel scan using a frequency tag when the search/scan stops on an active freq/channel. Since the freq search could stop on an active freq every second, it would require the recorder to do a bunch of starting and stopping, resulting in a longer delay between stops, plus adding alot of cpu usage...

Regards,
Jay

From: Peter
Topic: 72 Message: 75

Hi Jay, been away fro a few days so please excuse the delay in replying.

OK understand the limitations of donations but still having problems which were not evident previously. Am using following sequence:

1. Add new Memory Bank (Number 22)
2. Software automatically selects currently selected frequency
3. Go to Menu - file - import bank
4. Opens new Import Window
5. Select - file-load TalkPCR .Fql file
6. Locate and select file
7. Re-opens Import Window
8. Click on file name

At this point previously the contents of the file are shown, but now nothing happens. Even if I select a previously entered file name the same occurs.

Can you advise, please.

Best wishes,

Peter

From: Jay
Topic: 72 Message: 76

Hi Peter,

OK, I'll start from No. 4...

4). Bank Import Window Opens.
5). Click File Menu -> Import fql file.
6). "Import TalkPcr Fql Bank" Dialog opens.
7). I choose a Fql file to Open and click OK.
8). File is loaded and the Bank Name appears in the Bank List.
9). I Left-Click on the Bank in the Bank List and Channels are shown in Channel List.
10). I "Right Click" on the Bank in the Bank List, a Pop-Up Menu appears.
11). I have the option to "Select All" (same as manually clicking the check-marks in the Channel List).
12). I Clicked "Select All" and now the "Import Selected Channels" Button is now usable.
13). IF I click the "Import Selected Channels" Button, All Selected Channels are now copied to the Current Bank.

14). Right Clicking on the Bank in the Bank List also shows "Import - Add New Bank" & "Import - Insert New Bank".
15). Clicking on "Import - Add New Bank" Creates a New Bank and imports the selected channels to this Bank.
16). Clicking on "Import - Insert New Bank" Inserts a New Bank and imports the selected channels to this Bank.

Regards,
Jay

Hi Jay, been away fro a few days so please excuse the delay in replying.

OK understand the limitations of donations but still having problems which were not evident previously. Am using following sequence:

1.. Add new Memory Bank (Number 22)
2.. Software automatically selects currently selected frequency
3.. Go to Menu - file - import bank
4.. Opens new Import Window
5.. Select - file-load TalkPCR .Fql file
6.. Locate and select file
7.. Re-opens Import Window
8.. Click on file name
At this point previously the contents of the file are shown, but now nothing happens. Even if I select a previously entered file name the same occurs.

Can you advise, please.

Best wishes,

Peter

OK Jay thanks for the reply. I seem to be doing exactly as you suggest so the problem must be with the fql file. I'll work on it.

Thanks again,

Peter

Subject: Re: [PcrPro] Imports

Hi Peter,

OK, I'll start from No. 4...

4). Bank Import Window Opens.

5). Click File Menu -> Import fql file.

6). "Import TalkPcr Fql Bank" Dialog opens.

7). I choose a Fql file to Open and click OK.

8). File is loaded and the Bank Name appears in the Bank List.

9). I Left-Click on the Bank in the Bank List and Channels are shown in Channel List.

10). I "Right Click" on the Bank in the Bank List, a Pop-Up Menu appears.

11). I have the option to "Select All" (same as manually clicking the check-marks in the Channel List).

12). I Clicked "Select All" and now the "Import Selected Channels" Button is now usable.

13). IF I click the "Import Selected Channels" Button, All Selected Channels are now copied to the Current Bank.

14). Right Clicking on the Bank in the Bank List also shows "Import - Add New Bank" & "Import - Insert New Bank".

15). Clicking on "Import - Add New Bank" Creates a New Bank and imports the selected channels to this Bank.

16). Clicking on "Import - Insert New Bank" Inserts a New Bank and imports the selected channels to this Bank.

Regards,

Jay

Hi again Jay,

Sorry to hassle you again but I am completely at a loss with this now. I attach a file Nilsigs No1.fql which works fine in TalkPCR but will not go into PCRPro. I get to number 9 in your list but although the file shows up in the bank list, left or right clicking does not activate the display of channels in the channel list!

Help!!!!!!!!!!!!!!

Hi Peter,

Ok, a simple fix is needed.
Just add 1 comma "," at the end of every line...

This was a bug in talkpcr where it added an extra comma at the end of each line.
I'll have to make a change to accept 19 or 20 entries per line instead of 20, since the 20th isn't really used.

Regards,
Jay

82. Resend of Queries

Yahoo group: PcrPro
Date: 2008-04-11 07:59:11 UTC
From: Peter
Topic: 82 Message: 82

Hello again Jay,

First can I say how grateful I am for the help and advice already given? My PCR Pro is working well but I appreciate that this is effectively a beta version and that there are some changes and improvements to come. I look forward to developments.

As we don't have the benefit of a manual, which I assume may follow, forgive me if I list some items that either I don't fully understand or don't appear to function correctly:

1. Why sometimes, even with the Scan Bank button depressed, do I get a message saying "No Bank selected"?

2. Why sometimes, and for no apparent reason, does the scan function fail to work necessitating a restart?

3. In the scan dialogue box why do the left and right buttons only scan upwards? Is there a fault here?

4 What is the difference between the Scan delay setting in the dialogue box and the menu-controls-scan delay settings?

5. In the menu-edit-organize banks there is a check mark. What does this indicate?

6. Could a future version encompass an upward or downward movement of the Channel counter as the scans progress?

Please accept these comments as queries and not in any way as criticisms.

Best wishes,

Peter

Hi Peter,

Sorry for the delay in replying, been a bit busy lately...

1). Gremlins :) I haven't been able to duplicate this. Even if you have some "Channels Scan Button Depressed", but not the "Bank Scan Button Depressed", it won't scan and will give the same message...

2). If you start a scan and get a message and the Scan Button doesn't reset, click the Hold Button to reset. (I'll have to fix this)...

3). Hmmm, your right! some times it does do this for me too, but not always. Another thing to fix...

4). In the main display, the Scan Delay knob determines How Much Time to Listen to a Signal before proceeding to another channel. The Resume Delay (In the Scan Delay Settings), determines How Much Time to Wait on a channel after the Squelch closes, before resuming a scan. If the squelch opens in this time, the resume time is reset and continues to wait until the resume time, times-out...

5). Hmmm, a bug when the Organize Banks dialog is closed. The checkmark should only be visible when the dialog is open... Another Fix to add...

6). Yep, this was just an oversite in the new transition...

I'll add those fixes to the To-Do list... Thanks for the help in checking it out, it is appreciated :)

Regards,
Jay

From: Mike Bond
Topic: 82 Message: 84

Hi Peter,

Yes, isn't it a great program ..... ?
Despite Jay looking into these items, I want to confirm the conditions when your item 2 occurs ... my recent experience is that after some indeterminate time, the scan doesn't stop, but slows down to less than one channel per second, non-recoverable by any change in program settings. An exit and program restart fixes this, for a while, then it recurs.
Also, on each restart, the scan speed control must be changed from the 12 o'clock position for the scan to work. (I had mentioned this to Jay).
I thought at first these were caused by a buffer problem due to running the RS232 through a USB converter, since I'm using a laptop with no actual RS232 port. Then I found that TrunkPCR does not behave this way.
ie., it remembers the last scan speed setting and keeps scanning indefinitely
until the hold is depressed.

Best regards,
Mike

When it slows way down, does it only happen when scanning certain channels?
Like when you have alot of busy channels, is it actually pausing on
channels that have the "Busy" indicator displayed???

From: Mike Bond
Topic: 82 Message: 86

Hi Jay,
Having carefully documented the scan slowdown, I now cannot
reproduce it! To answer your question, it was occurring scanning
3 banks with a total of 64 channels, a couple of lockouts and maybe
5 channels with frequent activity. The hang was not related to activity.
At max scan speed the squelch break does not cause a pause so I
usually set it half a notch counter clockwise ... after a while it may stop
pausing but setting it another half notch back resolves it so am guessing
it's a temperature sensitivity in the radio squelch circuit.
I lose 5 chls/sec scan speed but it's very reliable with this setting.

This is kind of off subject but I'm still not sure the scan slowdown was/is
not related to the RS232/USB converter ...
The other converter I used previously with PcrPro would occasionally
cause the laptop to hang with no escape except removing the battery!!
(Why don't laptops have reset buttons like desktops??).
FYI, that converter works great with my FT-817 and its software with
never a hiccup .... simultaneously using the newer converter on a second
USB port with PcrPro or TrunkPCR.
Last year I had Googled RS232/USB converters since they seemed to
be causing major user problems ... my old Belkin one still will not work
under XP even with new drivers but works great with 98SE ....

Keep up the good work ....
Mike

Hi Mike,

My apologies for the delay in replying.

The scanning problem just seems to come up at any time - not during a search
but after changing banks or editing or changing anything. However it seems
Jay has it in hand and we can look forward to a new version soon?

Yep, it certainly is a cracking program and is on a different planet to the
junk that comes with the radio and indeed any of the other similar programs
I have seen.

Best wishes,

Peter

88. PCR Pro version 1.12.253 Now Available

Yahoo group: PcrPro
Date: 2008-04-20 00:57:31 UTC
From: Jay
Topic: 88 Message: 88

PCR Pro version 1.12.253 Now Available for Downloading from homepage:
http://members.cox.net/fiftyone.50/PcrPro/PcrPro.html

This update has a few Additions, changes and fixes...

Apr 04,2008 - Added: Direct Frequency input using keyboard.
Apr 04,2008 - Fixed: Entering Frequency in Freq TextBox.
Apr 05,2008 - Added: Auto-Connect at Startup.
Apr 06,2008 - -----: Importing Corrected Talkpcr Fql files.
Apr 12,2008 - Added: AFC, AGC, ATTN, NB, VSC and DSP settings Saved for each Channel.
Apr 13,2008 - Added: Channel Display Grid that allows you to edit Channel Settings.
Apr 13,2008 - Fixed: Scan Speed knob initial setting.
Apr 14,2008 - Fixed: Reset Scan Button when No Scan Banks Selected to Scan.
Apr 14,2008 - -----: Removed Scan Delay Menu.
Apr 14,2008 - Added: Scan Delay Settings Button.
Apr 14,2008 - Fixed: Update Freq Display in Frequency Search.
Apr 14,2008 - Fixed: Selecting Channel Scan Button, then changing channel caused
Bank/Channel Scan State to be Reset.
Apr 14,2008 - Added: Display of Scan Speed / Delay value when adjusted.
Apr 15,2008 - Added: Update Channel Display during Scanning.
Apr 15,2008 - Fixed: Removed "Check Mark" from Organize Banks menu.
Apr 15,2008 - Fixed: Scan Up and Down buttons only scanning upwards.
Apr 15,2008 - Fixed: "No Bank Selected" when Scan Bank button depressed.
Apr 16,2008 - -----: AFC Button now only enabled in 6kHz/15kHz FM.
Apr 16,2008 - Fixed: Noise Blanker now activated by NB Button.
Apr 18,2008 - Added: Duplex Offset Frequency setting for All Channels.
Apr 18,2008 - Fixed: Changing CTCCS Settings now have an effect.
Apr 18,2008 - Fixed: Setting of DTCS Options when changing channels.
Apr 18,2008 - -----: Dual Receiver for PCR-2500 should be working now.
Apr 18,2008 - Fixed: Windows Height Adjustment for Vista PC's.

Version 1.12.253 Released 04/19/2008

Hi Glenn,

Yep, I did do a little tweaking on the squelch, but very minor.
Could be that atmospheric conditions are better?

Out here, I can tell that there is a cycle when reception is better to listen to some distant stations, like the Edacs system 100 miles away. When it's cloudy or colder, reception is lousy, but after it warms up it's much better...

Take Care,
Jay

Hi Tony,

1). I'm thinking that Icom Records and Playsback the USB Audio at the same time to acheive playing back on the speakers instead of acting like a passive Line-In or Mic Input... But I don't do that at this time...

2). I'll have to look into why the program is stuck in a loop and which one. I
do have code in place so that if the PCR's power is turned off, that it exit's some loops, so that's a good clue where to start looking...

Regards,
Jay

Topic: 98 Message: 98

I am also new to this and can't get started either. I initially dloaded trunkpcr two days ago and it ran fine. So today, I dloaded the latest version of PCRPro and I cannot get it to connect. It tells me that the radio is not responding, to check comm port, USB connection, pwr, etc. I reset the com port and select keep alive, and turn the radio back on. I then select the power button and upon hearing the PCR's speaker 'click' the busy indicator comes on and the program crashes. It then offers to report the error to microsoft and in this report it states I'm running NT 5.1 when I am running XP pro. Enevitably the program shuts down.

Oh by the way, when I try running TrunkPCR now I get the same error.

HELP!!!

J

Hi Jay,
Great updates, including some I requested ... thank you!

However, my PCR100 "hanging scan" mystery continues ....
As I had mentioned, this is using a laptop with no RS232 ports.
After random times of leaving scan running, it essentially stops
... sometimes, just turning off the program power button, then
turning it back on fixes the phenomenon.
Changing scan speed or delay does not affect the 'hang'.

The issue occurs with USB/RS232 converters using 2 different
chips and drivers and virtual RS232 ports. I'm guessing it causes
the converter chip to hang-up as it sometimes prevents RS232 access
to other programs unless I unplug then reinsert the converter dongle.

This 'hang' happens only with PcrPro, never with TrunkPCR.

I noticed that, when activated from the menu, the COM status
'LEDs' in PcrPro stay lit: upper left and lower right are red, upper
right and lower left are green. It is the same for TrunkPCR except
the lower right 'LED' pulses red/green every 3 seconds while polling
and faster with scan activity, whereas in PcrPro it does neither.
Could this be related to the different program behavior?

Thanks again, Jay, for all your work ....

Mike

From: Jay
Topic: 103 Message: 103

If you get an Error 9 - Subscript out of range, when loading for the first time, please download the "PcrPro.ini" file from the file section of this group.
This is happening on XP, but on Windows 95 it runs ok.
I am in the process of tracking down this error, a fix will be uploaded later...

Jay

Hi Mike,

Thanks for the feedback...

I'll do some more tests with the PCR-100 on the XP box. I use a Belkin F5U409 with the latest driver provided by M$.
That driver will sometimes cause the pc to reset, but for the most part it will run for hours without a problem...

The lower right LED is a COM Activity (RX Data) indicator and may appear to be Red most of the time, but will flicker to Green if you watch it close...

Strange that it works fine in TrunkPCR, but not PCR Pro since they use the same COM Port controller code. I must have forgotten to connect a wire some where :)

Thanks again,
Jay

Hi,

Hmmmm, my Euro PCR-1000 works just fine...
Maybe your setting with squelch? Tone SQ or VSC?
Where do you have the volume level set to? try Top-Dead-Center (12 O'Clock)...

PCR Pro version 1.12.253 Now Available for Downloading from homepage:
http://members.cox.net/fiftyone.50/PcrPro/PcrPro.html

This update has a few Additions, changes and fixes...

Apr 04,2008 - Added: Direct Frequency input using keyboard.
Apr 04,2008 - Fixed: Entering Frequency in Freq TextBox.
Apr 05,2008 - Added: Auto-Connect at Startup.
Apr 06,2008 - -----: Importing Corrected Talkpcr Fql files.
Apr 12,2008 - Added: AFC, AGC, ATTN, NB, VSC and DSP settings Saved for each Channel.
Apr 13,2008 - Added: Channel Display Grid that allows you to edit Channel Settings.
Apr 13,2008 - Fixed: Scan Speed knob initial setting.
Apr 14,2008 - Fixed: Reset Scan Button when No Scan Banks Selected to Scan.
Apr 14,2008 - -----: Removed Scan Delay Menu.
Apr 14,2008 - Added: Scan Delay Settings Button.
Apr 14,2008 - Fixed: Update Freq Display in Frequency Search.
Apr 14,2008 - Fixed: Selecting Channel Scan Button, then changing channel caused
Bank/Channel Scan State to be Reset.
Apr 14,2008 - Added: Display of Scan Speed / Delay value when adjusted.
Apr 15,2008 - Added: Update Channel Display during Scanning.
Apr 15,2008 - Fixed: Removed "Check Mark" from Organize Banks menu.
Apr 15,2008 - Fixed: Scan Up and Down buttons only scanning upwards.
Apr 15,2008 - Fixed: "No Bank Selected" when Scan Bank button depressed.
Apr 16,2008 - -----: AFC Button now only enabled in 6kHz/15kHz FM.
Apr 16,2008 - Fixed: Noise Blanker now activated by NB Button.
Apr 18,2008 - Added: Duplex Offset Frequency setting for All Channels.
Apr 18,2008 - Fixed: Changing CTCCS Settings now have an effect.
Apr 18,2008 - Fixed: Setting of DTCS Options when changing channels.
Apr 18,2008 - -----: Dual Receiver for PCR-2500 should be working now.

Apr 18,2008 - Fixed: Windows Height Adjustment for Vista PC's.

Version 1.12.253 Released 04/19/2008

Regards,
Jay

Hi Ron,

Hmmm, well I don't have a good answer as to why it's behaving like that. You could try disabling (Uncheck) the "Connect at Startup" under the Option Menu if it's enabled.

One thing you could do, is to open up the debug window by clicking the "Bank" label (just above the Bank Select Knobs/Dials). Click the "Save" Checkbox in the Log to File frame and record the activity of the PCR for a few minutes and send me the log file that's created in the PCR Pro folder. While you are recording the activity, play with all the buttons, channel & bank knobs, Freq/Chan buttons, Scan, Search and freq selector knobs and see what is and isn't working...

After you send me that log file, I can take a look and see what's going on...

Others having this problem, could do the same thing so I can compare the results...

Thanks,
Jay

I found the problem to be a loose usb connection in the back of the computer. I am still haveing problems when starting up pcr I get a error "Icom pcr scanner has encounterd a problem and needs to shut down" When I close error dialoge and pcr shuts down I simply run again and everything works fine. Then when I am through with pcr and shut it down I get an End now you may loose data box so I click end now and the computer reboots. So I guess I still have problems to work out. It appears to be a windows xp problem and seems to work differently every time depending on what you turn on first or shut down first just have to work at it.

Hey Jay,

Steve Merrick here . I bought a dell laptop that I would like to run Trunkpcr on. Can I send the particulars?

Steve

Hi Ron,

Wow! I've never had that much problem with XP.
If you find out some more info as to why XP is acting that way, please let
us know about it...

Thanks for the report,
Jay

Hey Steve,

Ok, then send me the registration info from the New Dell and I'll send out the new key file...
I'll replace the info from the new dell with the eMachine then...

Jay

Morning Peter,

It's working for me to left-click-n-hold an item from the source and dragging to either the source or destination list.

When you left click-n-hold an item in the source and drag/move the mouse, do you get the [+] drag icon or what exactly does it not do?

Hey Peter,

Well, if it works "some times" and not others, then it's just a matter of the squelch setting for the right mode and filter.
Some mode / filter combinations will close squelch at the 9:45-10 O'Clock where others will close at 12 O'Clock.
If the squelch isn't closed, the scan won't start until it's closed...

That would be the only reason I can think of as to why it's acting like that.

I don't know why you would have to close the program down and restart for the scan to work. You really shouldn't have to.

There isn't any other reason, the program doesn't change itself :) if it works some times and not some other time, then maybe just operator error???

Hey Peter,

I just re-verified this....

Actually, you can drag-n-drop anywhere from channel #1 to the last channel in a list :)

It wouldn't make any sense to drag and drop to channel #1 only, which is why it doesn't work that way...
It's a complete drag-n-drop-sort operation...

After you have made your changes, click the save button...

Hi Jay, understand you are away till Tuesday next, hope you had a good trip.

Am trying to get to grips with the Search Bank feature so could you tell me first of all how I can find how many searches I have already made and saved?

Also is this facility bug-free and ready to go as I am getting some lock-ups which can only be solved by control-alt-delete? The Search Banks feature looks interesting f and I could really benefit from it, if I can solve this problem.

Best wishes,

Peter

Yahoo group: PcrPro
Date: 2008-05-23 22:20:00 UTC
From: Jay
Topic: 130 Message: 131

Hi Peter,

There isn't a "Saved Record" of the number of searches you have made or saved. That's just something you need to do yourself... I think it would be pointless to keep track of those numbers in the program...
If you want to keep track of your searches, save the results in a separate folder, then you can visually see how many you have made by counting the number of files...

If you are getting some kind of error in the program, please give me a "Step-By-Step" sequence of the buttons you are pressing/clicking for the operation you are trying to do...

I'm not a mind reader, so please give more info (as stated above) than just a vague "This feature doesn't work" :)
Please remember to do this in the future as well !!!

Thanks,
Jay

From: gaby53mt
Topic: 132 Message: 132

Jay, I wish that there was a way you could tie your PCRPro key to a machine name/owner name like Noel Bouchard does with his excellent RXPlus program for the RX320.

With his system, as long as the machine name & user name are correct the registration key works. This protects his users - if something happens to Noel or he is unavailable, his program users aren't hung out to dry if they need to reload the OS or move to a new computer, and Noel's property rights are still protected.

With your system, what happens if something happens to you? Moving to a new system or even a reinstall of the OS requires a whole new key from you. It would be nice if your program was less mortal than you...

Mind you, I am NOT criticizing - but am stating a minor concern. I was kind of shocked when reinstalling the OS on my computer required a new key.

Anyway, keep up the good work. I use your program constantly on the PCR1500.

133. Re: [PcrPro] Just a thought...

Yahoo group: PcrPro

From: Jay
Topic: 132 Message: 133

Hi,

Yep, I understand your concern, however, every program author has their own way of doing things and I am no exception.
I don't know how Noel does his protection internally, but just using the machine name/owner makes for a weak key that could be easily copied to another PC, enabling the use of many free clones.

With my key file, if a user were to clone another PC with the same info, they would end up with a useless PC. One user tried this already and M$ disabled his OS and he had to do a complete re-install of the OS...

Not to worry though, if I die before my time, I already have in place a contingency for this :)
My Registration Program will be taken over from a trusted friend or family member...

My users are not hung out to dry when their info changes, my programs inform the user that their info needs to be updated, they email me the updated info and a new key file is usually sent out with-in a few hours, pretty easy don't you think?

Bottom Line: My registration info / process will remain as is... Because it works for me :)

Regards,
Jay

From: Richard
Topic: 134 Message: 134

Hi Jay

I have been using PCRPro for a while now with a PCR1000 and now want to run a second instance with a PCR1500.

How do I tell PCRPro to use a second .ini file?

I assume I have to add something to the target line "C:\Program Files\PCRPro\PcrPro.exe" but haven't been able to work out the syntax.

Do I need to change 'PCRType' to something other than '2' for the PCR1500?

Best regards

Richard

From: ronrobinson6
Topic: 137 Message: 137

I was haveing problems trying to import mch,ifc,bnk and csv files into pcrpro. The files did not populate the import screen nor did they seem to do anything. To make a long story short I just got frustrated and started adding and deleting files directly in the banks folder and finally endded up whith pcrpro and memory management completely out of sync with double channel files and channels I thought I had deleted. To start over I just emptyed out the bank folder completly and started over. I still cant get the import screen to populate and I get errors trying to load bank data. The question is dose their need to be an inisialization or template bank file that pcrpro checks for correct header information.
It seems to me that there was a bank file that installed with pcrpro but I must have deleted it cant remember what it was called. If this is the case then dose this file need to be saved with the profile menu and where can I find a new one.

I've just installed PcrPro for the first time (v1.12.254) with Vista SP1 and I'm having the same problem: Sound always comes out of the interal speaker, and I can't get it to come out of the PC using USB Audio Codec.

Regards,
Graham.

Hi Graham,

Yep, this issue has already been identified and acknowledged.
When I have a fix, y'all will be notified :)

Regards,
Jay

Hi Ron,

First off, there isn't any mechanism for importing IFC (What are these types?) or CSV files, if it's not in the menu, then it's not possible. Trying to import these files as another format will just not work...

Which ".Bnk" files are you trying to import? Can you send me the files? I'll take a look as to why there are not loading...
Have you tried the "Load Bank" option in the File -> Load Bank Menu?

PCR Pro creates one Bank file when it's first loaded.
You can create a NEW Bank by using the Add/Insert Bank Buttons in the Main Display...

Thanks,
Jay

Hi Ron,

Well, I found the reason why you can't import that bank file, it's from the
old PCR-Mini1k format.
There isn't an option to import these old bank files.

The Import Dialog only states "ProPro1k .Bnk format" and "Optocom CSV
format", so you can't Import other .Bnk files or other CSV files using
thise options, it just won't work since the formats are different...

If you were thinking of the ".fql" format from talkpcr, then that option
does work...

Regards,
Jay

I should think there is a way to convert those files with a text editor in order to import them.There just isnt that many propro1k,bnk files out there but many frequency list that could be converted.

Hi Ron,

Yep, you probably could edit some of the unsupported files in notepad...

You can also use the File -> Load Bank option to load .Bnk files from TrunkPCR and PCR Remote since those use the same format as PCR Pro...

If you are a donating user on RadioReference.com, you can also use the Web Import feature, it makes things go much easier :)

You can also use the Frequency Search option under the Help Menu, that takes you to the Percom database on the web and you can have the search results saved as an Icom .MCH format and import them that way as well...

Everyone can also share their .Bnk files in the File Section of this group. There are some .Bnk files in the file section of TrunkPCR yahoo group...

Regards,
Jay

Hi Ron,

Scan will check the channels & banks that you have "Set to Scan" and are not "Locked Out" and display the channel information when the channel's frequency is active...

Search will start from the current frequency and either search up or down (depending on how you start the search) for active frequencies. When an active frequency is found, it will be displayed and let you know if it's aready saved in your Scan Banks or Not...

The Scan Edge isn't selectable at this time. I beleive I only have that selectable in Pcr1kMini (An old aoutdated program now)...
I could add it in the next update though...

Jay

Hi Ron,

I guess you haven't played too much with it yet?

1) On the bottom of the main display, press the [Search Banks] Button to
display this feature.
2) Right-Click one of the buttons on the right of the display to edit your
search ranges, Left-Click to Activate this Search.
3) Click the [<] or [>] Button (left of the Power Button) to start your
search.
4) When done with your search, click the [Hold] Button to Stop the Search.
A window will be displayed with your "Active Hits", from there you can
transfer them to a bank

Regards,
Jay

153. Interference from power line adaptors

Yahoo group: PcrPro
Date: 2008-07-22 12:34:00 UTC
From: Peter
Topic: 153 Message: 153

Dear group

This is a copy of a message sent out originally by the owner of a new group, UKQRM.

This group has been set up to deal with the huge threat of power line adaptors, similar to that which BT provide.

These adaptors pump RF into the mains wires of a house to form a network within that house.

Of course these same mains wires act as transmitting antennas.

The resultant QRM can extend many hundreds of feet away from the property.

See this example.
http://www.youtube.com/watch?v=S__UBDaL-aE

We already have 115 members in UKQRM and would like to welcome other users of the short wave spectrum to the group be they hobby or professional users.

This terrible interference which is 24/7 never letting up makes no distinction between the short wave listener or pro user!

If you have the QRM now you should join us to help fight back, if you are concerned about it for the future (and you should be) you should join as you can help fight!

The time is now, don't leave it until its all too late, join today and be part of a group that wants to preserve the short wave spectrum.

http://tech.groups.yahoo.com/group/UKQRM/

Regards

Peter (On behalf of UKQRM Owner

OK Jay all well and program running well again - thanks.
Next problem! I do not seem to be able to convert an xl file saved in csv format to an fql format. I recall that previously I had just re-named the file with the fql extension.Am I doing something wrong here?
Best wishes,
Peter

Topic: 156 Message: 157

Hi Peter,

The fql and csv file would have to have the same amount of entries on a line
of text and in the same order.
If the entries are out of order, then PcrPro would set an entry to it's
default setting.
If a line has too many or too few entries, then PcrPro will just ignore the
line and try the next.

I would compare a good fql file to the one you are creating and see what the
difference is...

Regards,
Jay

Hi Peter,

There will be an update out in a few weeks.
The main thing being the updated RadioReference Web Import interface.
I'm in the process of updating that now and shouold be done in a few more days...

On a side note:
I'll be away from August 28th to September 2nd, flying back east for my 2nd oldest Daughter's Wedding :)
In that time I will be unable to reply to emails or send out any key files...

I'll post a separate message before I depart...

Regards,
Jay

162. Grabar registro de señales debiles

Yahoo group: PcrPro
Date: 2008-08-27 07:46:48 UTC
From: mortadelasinaceitunas
Topic: 162 Message: 162

Hello.

I volunteer at an NGO dedicated to the study of birds in migration. We are in Tarifa (Strait of Gibraltar - Spain) the migratory corridor between Europe and Africa.

Our Web: http://cocn.tarifainfo.com

I use the ICOM 1500 to locate very weak signals on CW. Bird radiolabelled (Radiotracking) in recovery centers across Europe (Hospitals bird) The birds emit very weak signals on CW.

With the software and IC-PCR1500 tried to use the REC which she recorded as a logers in CSV File gain signals. To hear the signals that I always have sql open.

Often the signals are so weak that they are below 0 and CSV does not collect any data.

The question is PcrPro is responsible for recording the signals of an entire bank in CSV?

Is there any other solution to keep records for when we receive any signal?

What is really interesting would be to leave the program running and then be able to look at logers.

He put on the forum 2 wab files to hear the signals we receive are in the folder sound.

Thank you.

Paco

Hola.

Soy voluntario en una ONG que nos dedicamos al estudio de las aves en migración. Estamos en Tarifa (Estrecho de Gibraltar □ España) el pasillo migratorio entre Europa y África.

Nuestra Web: http://cocn.tarifainfo.com

Utilizo el ICOM 1500 para localizar señales muy débiles en CW. de aves radiomarcadas (Radiotrcking) en Centros de recuperación de toda Europa (Hospitales de aves) Las aves emiten señales muy debiles en CW.

Con el software IC-PCR1500 e intentado utilizar la función REC la cual graba a modo de logers en formato CSV File la ganancia de las señales. Para escuchar las señales siempre tengo que tener sql abierto.

Muchas veces las señales son tan debiles que están por debajo de 0 y en CSV no recoge ningún dato.

La pregunta es ¿PcrPro tiene la función de grabar las señales de todo un banco en formato CSV?

¿Existe alguna otra solución para guardar registros para cuando recibamos alguna señal?

Lo verdaderamente interesante sería dejar el programa corriendo y luego poder consultar los logers.

He puesto en el foro 2 archivos wab para que escuchéis las señales que recibimos, están en la carpeta sound.

Gracias.

Paco

Subject: RE: Updates?

Hi Jay, Great news I thought you may have stopped development.

OK on the auto set but the continuous scan is puzzling. I start a scan by selecting one of the banks and then pressing the left or right scan button in the scan/search panel. The only way I can get to scan contiuously is to depress another scan bank button after the first scan has started. Also some of my scan banks are not continuous. For example 1 is for 4350 to 4750 and 2 is for 5050 to 5400. If I depress 1 and start a scan and the depress 2 the process then contiues to scan between 4750 and 5050 which I don't necessarily need. Is this what you would expect?

Can I also mention an annoying bit? The entry of a frequency into the Memory Bank Frequency Box does not recognise the decimal point. I can get round this by over typing another frequency and leaving the decimal point in place but I don't know if this is a PCR Pro quirk or whether there is a glitch in my computer. I can't repeat this fault anywhere else.

Regards,
Peter

Hi Peter,

Don't get me wrong, I haven't stopped working on it, it's just that I haven't been working on it the past few weeks :) I've been working on other things right now...

The Auto-Set feature will automatically set the correct Mode, Filter
and Step Size for a particular frequency range when tuned to a
frequency...

To Scan "Multiple Banks", just make sure the "Scan Bank" button is
depressed for each bank you want to scan...

In order to "Scan" a bank, the [Scan] buton in the "Memory Banks" panel,
should be pressed once, showing as if was pressed in. This goes for either
the Bank or Channel side...
Or when you say "Scan Bank" do you mean "Search Banks" ???

This may happen if your Regional Settings in the Windows Control Panel has
the "Decimal Separator" set to Period (.). If this is so, then you can
either change it or try using the Comma (","). The Comma is used in some
countries as the Decimal Separator...

From: John Schneider
Topic: 166 Message: 166

Jay,

#1 - After numerous attempts I've finally got my Vista x64 to recognize my PCR-1000. The problem is the only software I can use is Ham Radio Deluxe (great for HF, not designed as "scanner" software) as it recognizes the com port # 27. It appears as though every attempt I made to get the Prolific driver installed, even though the install failed, created another port.
Now that PcrPro only recognizes up to port #16, I can't use it. Can you offer any advise (including how to re-number com ports n Vista x64)?

#2 - I have attempted to register PcrPro, however, the Windows ID, as in TrunkPCR, isn't populated. is there any work-around?

Resolution or not, I really appreciate your constant responses to user questions!

John

Hi John,

#1)
You can go to the Control Panel, Select Device Manager under System Properties and click the [+] of Ports (COM and LPT) to expand the list. Doouble-Click the item "USB Serial Port" to bring up it's properties, click the Port Settings Tab and then the [Advanced] Button. A window will pop up and will have a setting to allow you to change the COM Port Number. Change it to a Port Number 16 or Less and you'll be able to connect to your radio...

#2) Sorry, no work around, but I'll take a look at my notes in the ToDo list and see if I can get an update out in the next few days. This will at least cover the Vista x64 registration problem and an updated RR.com web import...

Regards,
Jay

168. RE: [PcrPro] Updates?

Yahoo group: PcrPro
Date: 2008-12-29 21:11:22 UTC
From: Peter
Topic: 164 Message: 168

Hi Jay,

OK on the decimal point. I understand this but it would be helpful if you could change this in the next version.

Regarding the other point, perhpas I should have been a little more clear. The problem relates to the Search Banks feature. What I am trying to acheive is to set up the 19 Search Banks to cover a list of frequency ranges which are not necessarily continuous. For example Bank 1 is set up to scan 4.0 to 4.75 MC/s and Bank 2 is set to scan 5.05 to 5.99 MC/s Both have a step of 1kc/s

The signals I am searching for have a short transmission time of around 2 minutes so I need to cover a wide range of frequencies very quickly. I can achieve this partly by setting a fast scan speed but I do not want to waste time scanning non-bank frequencies such as in the above case 4.75 to 5.05MC/s

So the question is:

How to search banks sucessively without covering the frequencies between the end of one bank and the start of the next as above?

Hope this is clear.
Best wishes for the New Year,
Peter

Hi Peter,

As far as the decimal point goes, if your Regional Settings in the Control Panel has the (",") comma as the decimal separator, then you will have to change this yourself in the Control Panel...

The Frequency Box in the Memory Banks Panel does accept the Decimal or Comma, but only if your Decimal Separator has it defined as such. No Changes to be made here on my side...

On the other point, I understand that you had the Scan Banks confused with the Search Banks, just wanted to make sure you had the terminology correct :)

The Search Banks are currently only configured to search One Search Bank at a time and not consecutively (One after the other). You have to click the [Hold] button before switching Search Banks.
I may add an option in a future release to search each Search Bank consecutively, but not in the release due out in a few days...

So for now, your only solution is to search 4.75 mhz to 5.99 mhz in one Search Bank...

Jay

Hi Jay,
Thanks for the quick reply. Well, the Control box settings are already set to a full stop "." character, but I have just checked again and after restarting the program I can change the frequency and get the decimal stop to work fine, but only once. Any subsequent changes will not accept the decimal point. The only way I can get it to work again is by exiting and restarting the program?

Any suggestions?

OK on the search banks and hope that a future edition will include this feature.

Peter

In order to "Scan" a bank, the [Scan] buton in the "Memory Banks" panel, should be pressed once, showing as if was pressed in. This goes for either the Bank or Channel side...
Or when you say "Scan Bank" do you mean "Search Banks" ???

> Can I also mention an annoying bit? The entry of a frequency into the

> anywhere else.

This may happen if your Regional Settings in the Windows Control Panel has the "Decimal Separator" set to Period (.). If this is so, then you can either change it or try using the Comma (","). The Comma is used in some countries as the Decimal Separator...

Hi Peter,

Well, I found the problem on the use of the decimal separator. I could swear that I had that working as the way I intended it to. There is an internal counter that counts how many times the comma or decimal point is pressed so that only one is accepted. I found that the counter wasn't being reset in some operations, but is fixed now :)

Thanks,
Jay
----- Original Message -----
From: Peter

Hi Jay,
Thanks for the quick reply. Well, the Control box settings are already set to a full stop "." character, but I have just checked again and after restarting the program I can change the frequency and get the decimal stop to work fine, but only once. Any subsequent changes will not accept the decimal point. The only way I can get it to work again is by exiting and restarting the program?

Any suggestions?

OK on the search banks and hope that a future edition will include this feature.

Peter

Jay

180. Importing files

Yahoo group: PcrPro
Date: 2009-01-13 11:52:50 UTC
From: Daedan
Topic: 180 Message: 180

I have been evaluating this softweare for a few days and am having trouble importing FQL and MCH files into the banks. I see the file names on the left hand column but the button remains greyed out and nothing appears in the right hand column.

I noticed that this has been raised in previous posts but I didn't see any resolution. Can my previous files be imported or is this a case of registering the product first?

Are there any UK (SW) based Users that have banks already programmed that would be willing to share?

regards

Ken

Hi Ken,

If the Channel listing doesn't get populated when you first import a Bank, then you should be able fill the channel list when you click on one of the Banks in the Bank List...

Thought this was covered here, may have been in the TrunkPcr group?

186. Noise Reduction Control Dail

Yahoo group: PcrPro
Date: 2009-01-23 11:47:53 UTC
From: Brian
Topic: 186 Message: 186

Mornin Jay,

I am running 1.13.257 version of PCRPRO and you know the Noise Reduction Control Dail moves all by itself. Like it has come to life or something ,even if it is turned off. Strang I thought so I left click on it and it stops for about a minute or two only to start moving again, clockwise,counterclockwise. Is this thing alive?LOL

Anyway I got my MCH files to work. You see when I was editing them I took out commas by mistake when I was deleteing channels/freqs. So I guess the commas may represent breaks within the structure of line or maybe some type of command. Also I reseached MHC TO CSV and found out what I need to do to convert it right. Go into my computer then tools then folder options then file types,that kinda thing. So all is well now for my MCH files. Its just the hole Noise Reduction Dail likes too play all by itself..LOL

Brian

187. Is this possible Jay

Yahoo group: PcrPro
Date: 2009-01-24 22:52:02 UTC
From: Brian
Topic: 187 Message: 187

You know Icom spend all this time in development of this receiver only to allow 3rd party software implementation. I for one am not really impressed with the Icom software but I do like the dual receiver option. The ability to run both VFO'S at he same time within the same program but watching two different ranges. Is it possible that PCRPRO could one day do the same process?

It was Freak of nature with the DSP dial. I have yet to reproduce this software phenomenon. Maybe I clicked it and was not paying attention which may have been the case because. It has not happen since.

Let me tell you I took me all day Saturday in redoing my MCH file data bases and bank layouts for import into PCRPRO. Total of 72 banks with 100 Channels per banking system. Some of these files were so large I had to breaking them down into sub-banks all within the same bank. Because of timing constraints I dont want to have (X)amount of time = (X) amount of seconds = that being greater the (60) to complete a sweep. So I had to make Blocks and each block equals a span (10MHz) within a givin sweep range (450MHz- 475MHz) stepped out at (12.5kHz.) Believe me I had 3 MCH files with over 2,000 different Freqs that are active.
Have a good Day
Brian

Hey Brian,

Yep you bet! Underneath the 3 Meter Buttons, just click the [Dual] Button after you click tje Power Button. A 2nd window should appear that control the SUB Receiver :)

Wow!, looks like your in a busy area too...

Hey Brian,

If you click on a knob and drag it off the outer rim and let go of the mouse button, then it will continue to rotate until it's been clicked again. This only works for knobs that Auto-Spin...

For CSV files, the CSV means "," Comma Separated Variable.
So you would normally have a comma bewtween each number, word or description...
Example:
CH1000,Local Sheriff Dept.,15540000,20,True,False,99

190. I have BIG problems Jay ,please help

Yahoo group: PcrPro
Date: 2009-01-28 01:30:17 UTC
From: Brian
Topic: 190 Message: 190

Ok I did a post but my system crashed so I dont know if it got through I will try this again.

1.) turn 2500 on
2.) start PcrPro
3.) click dual button
4.) select the ranges for each receiver..example one rang 460.000MHz-465.000MHz. second receiver 150.000MHz-155.000MHz
5.) start scan bank for the first one and it runs fine. start scan bank for the second receiver and PcrProit just freezes up and does not respond to anything(click any buttons,try to close) just won't do anything. Either I have to wait to the programs unfreezes or turn off my computer and then turn it back on.

OR

Follow the steps (1) thru (5) again it freezes up and after a few minutes it just starts scanning the frequencies ranges in just one receiver instead of two. I was hoping that I could scan two different ranges simultaneously run both VOF's at the same time within the same software like the Icom software which I do not like.

Now PcrPro does not report any errors but I have gotten two Blue screen errors which just shuts down my system. One time I turned off PcrPro only to find out my system was stuck. I want into Task Manger see PcrPro not responding so I click end task and got another Blue screen error. Also I have seen Processor usage Pegged at 100% when this happens and nothing will respond on my laptop.

Please Help, I really like this program and want it to work.

Thank you ,
Brian

191. Hey Jay can you help

Yahoo group: PcrPro
Date: 2009-01-28 00:56:52 UTC
From: Brian
Topic: 191 Message: 191

Ok I did what you said to get PcrPro in dual recieve but I am having problems.
1.) Turn on 2500
2.) start PcrPro
3.) I click dual button second interface comes up, so now I have two PcrPro screens running
4.) select different ranges for both of them...example. one receiver is between 460.000MHz-465.000MHz the other receiver range is 150.000MHz-155.000MHz
5.)select scan bank on first one it start to scan just fine
6.) select scan bank on second receiver and PcrPro just freezes up..will not respond to anything..ie click any buttons or try to close out..Nothing happens. so I have to either wait for the program to respond or shut down and turn back on my computer.

OR

I do all the steps from (1) thru (5)
then at step (6)select scan bank on second receiver and PcrPro just freezes up..will not respond to anything but after a few minutes it just scan the banks for both of the receivers on just one of the receivers and the other window just will not respond. I get no error messages either. So I dont know what to say. It's just not working for me.
I was hoping to be able to run both VOF's at the same time watching to different frequencies ranges simulaneously, like dual watch in Icom software which I thing sucks.

Thakn you for your Time

Brian

Hi John,

After checking the code and running the old web import, the new SOAP database on RR.com has 3 New York State Agencies that are not being returned from the server.

I notified Lindsay about this, so as soon as his people fix this, it will show up...

Regrads,
Jay

Hi John,

Hmmmm... Using RadioReference.com's old web import, there are 3 items that are shown for New York State - Agencies for ARTCC...

I'll check the code and see if it's being blocked for some reason or just not in the new SOAP Database on RR.com. If it's the later, then I'll let Lindsay know of the bug...

Thanks for the report,
Jay

Great news Jay. To be honest, I wasn't sure on which end the problem existed, yours or Lindsay's. I did know, however, that if I notified the "bulldog" , he wouldn't stop until he found a solution J

From: Brian
Topic: 201 Message: 201

Does anyone know where PcrPro puts the DTMF log? I run DTFM but can't seam to find the log on my laptop. Or maybe I am setting up something wrong when I create a save log. Is there any way to set it to show all characters instead of one at a time when it finds them?
Any Help would be great.

Thank you,
Brian

203. Newbee question

Yahoo group: PcrPro
Date: 2009-02-19 08:23:10 UTC
From: dxnature
Topic: 203 Message: 203

Hi all,

A few days ago is started to use PcrPro with my PCR1000. Since i cannot find a manual i'm puzzeld with a major item. After i programmed a few channels in memory bank 1 i liked to scan these channels but can not find the scan button. Searching a frequency range is no problem but scanning of programmed channels puzzels me.

Who has the answer?

After naming the search banks and saving them the search name keeps disappearing from the bank search buttons. Reloading the program brings them back but after a few minutes there gone again. What am i doing wrong?

Greetings,
Ron Liekens

That would be to the left of the power button.
The 2 scan buttons in the bottom middle are to Enable Scanning for Each Bank
or Channel...

Thanks Jay.

Yea, DTMF log is there I found it where you said. Is there any way to get DTMF to show all cahracters when it finds them instead of one at a time in the window? You know first it find a 9 and then the 9 is replaced by the next character whatever that might be.
So the window would show the 9 and the the next and next...ex.9*827,instead of 9 then 9 is replaced by * then the * is replaced by the 8 so on and so forth..

Hmmm,

Unless someone only pushes a button once every 5 seconds, I could see it doing that...

There is a built-in timer that times out at 5 seconds or so if a DTMF tone hasn't been heard in that amount of time. If the timeout occurs, then any new tones heard after that would be placed on to a new line...

What is the time interval between the tones you are hearing?

Hey Jay,
Sorry I haven't gotten back to you on this one yet as I have been really busy the past week and have not had time to work with my radios. I will take sometime this week and let you know about the timing interval with the DTMF. If my memory serves me well I will hear the audio end of the DTMF come through (fast)
 but PcrPro is doing it one digit at a time(showing)...ie..9 then 9 is replace with the next digit

Thanks for your time
Brian

From: kb5xe
Topic: 212 Message: 212

Hi, I am a new member to the group. Love the product. Thanks Jay.

A couple of questions:

1. Is there a way to save the items in the DSP section, so that on bringing the program up, they will be as I left them?

2. When working with a list of frequencies that I have imported, I want to change an area on each listing to be a different value. As in the squelch, volume, etc.. Can I highlight the areas and make one change to apply to all?

Thanks again Owen

Hi Owen,

1) I think PCR-Pro1K had that option, but after I changed the guts of the program to add support for the newer PCR's, looks like I left that out? I'll change it so that each Bank will have the DSP settings saved and set when loading...

2) That isn't available yet, but I'll see if I can make that do-able...

Regards,
Jay

I am going to purchased a digital scout and I see that the PCR PRO software has something for the scout. I think it a import/export feature dont remember right now. Will PCR PRO work with the Digital Scout also? I am trying to figure this out as how to interface the Digital Scout and what software I will be able to use with it.

Thanks
Brian

216. HD Crash!

Yahoo group: PcrPro
Date: 2009-04-03 01:08:13 UTC
From: Jay
Topic: 216 Message: 216

Hey All,

My old case for my Windows95 system took a dump 2 days ago...
The power switch on the front hasn't worked in a month, so I've been unplugging the power cord in and out of the power supply to turn it on or off.
The connector for the 110V on the power supply broke apart yesterday, so I transfered the motherboard, all cards, hard drives and cd drive to an older short tower.
Today when I powered up the system, I heard a squeal which I thought was the cpu fan, but turned out to be one of the hard drives, "the important one!"...
The computer doesn't recognise any hard drives now when it's connected.

Since I've been working on updating TrunkPCR and PCR Pro on the newer PC using the PCR-2500, I have the most current code for those on the new pc. However, the code for PCR Remote and TrunkMON was on the hard drive that crashed. The code for PCR Remote is one year old on the newer pc, but the code for TrunkMON is from laste last October...

I'll have to take a look on my back-up CD's to see when I backed them up last, but I think it was a month or two ago, hopefully not too much more than that...

The bad news is that the database program that keeps track of all donations and stores all the key file data, was on that hard drive too, so I'll have to see when I backed up that on CD as well. Luckily, I still have all the emails from PayPal and users that have sent donations by check, money order or cash. The copy on the newer pc is two years old, so it isn't totally gone :)

I was hoping to release an update for TrunkPCR and PCR Pro this week, but first I'll have to back-up and restore what I can, then rebuild what was lost...

I'll yet you know when opertion is back in working order...

Regards,
Jay

Hi Jay,
I commiserate with you after having to rebuild my records
lost from a harddrive crash earlier this year. Despite backups,
I spent lots of time finding files that seemed to go missing. :-(
Eventually had to do a fresh WinXP install and reload of apps.
The upside is I gained 9GB of disk space from junk I don't
even miss :-)

Topic: 216 Message: 219

Hey Mike,

Yep, this isn't the first HD that has crashed on me :)
But this time it's a different type of crash. The motor won't spin up and it just make a squeeling sound. I took the cover off and can see that the motor tries to spin up, but just rocks back and forth and the top platter has a ding in it. I bought two WD300BB's off ebay, one as a replacement and the other to use it's control board to see if that will get it going...

Out of 30GB, I had it partitioned into three drives. #1 for mp3's, #2 for current and old misc downloads and #3 for all of my programs, research, protocol info, many scanner docs and programs collected over the years, electronics and radio stuff, plus much more...

Hopefully I have most of that on my CD back-ups, but as you say, some won't be recoverable...
But at least I know how to rebuild Partition info, FAT's and folders once I can read it :)

Regards,
Jay

221. Error Jay

Yahoo group: PcrPro
Date: 2009-04-29 10:59:19 UTC
From: Brian
Topic: 221 Message: 221

Morning Jay,

I am running PCR Pro version 1.13.257 and I try to do the (2) receivers searching too different ranges. Main receiver searching 330.000MHz-410.000MHz FM and Sub receiver searching 750.000MHz - 810.000MHz FM. I get this error......SubWndProc:28-Application-defined or object-defined error. PCR Pro freezes up and then just disappears. So then I reload the program but this time I put in on the Main receiver one frequecny and on the Sub receiver a different frequency just to watch these (2) different frequecnies. Well I get the same error.....SubWndProc:28-Application-defined or object-defined error. PCR Pro freezes up and then just disappears(closes)
Also I have notices that when putting a frequency in the Main receiver sometimes I get this little RED dot up there where I see what frequency I am watching. What is this little RED dot mean? When running Trunk Pcr (which I love this program) I get a RED (frequency) word sometimes but then it just disappears. What does this mean? I have a PCR 2500-30 USA version if that helps you out.

Thanks for any help Jay

Brian

222. Re: [PcrPro] Error Jay

Yahoo group: PcrPro

From: Jay
Topic: 221 Message: 222

Hey Brian,

I'll look into this error, should have it fixed soon :)

That little Red Dot is an indicator to let you know that the frequency is already stored in one of the banks. It will also appear when searching through frequencies for the same reason...

The Red FREQUENCY indicator will appear when you tune the PCR to a frequency that is blocked in your radio, such as the Cell Phone freqs in US Models or if you tune to 3.3ghz in a 1500/2500 (2,999,999.999mhz is the specified max)...

Thanks,
Jay

>
> I am running PCR Pro version 1.13.257 and I try to do the (2) receivers searching too different ranges. Main receiver searching 330.000MHz-410.000MHz FM and Sub receiver searching 750.000MHz - 810.000MHz FM. I get this error......SubWndProc:28-Application-defined or object-defined error. PCR Pro freezes up and then just disappears. So then I reload the program but this time I put in on the Main receiver one frequecny and on the Sub receiver a different frequency just to watch these (2) different frequecnies. Well I get the same error.....SubWndProc:28-Application-defined or object-defined error. PCR Pro freezes up and then just disappears(closes)
> Also I have notices that when putting a frequency in the Main receiver sometimes I get this little RED dot up there where I see what frequency I am watching. What is this little RED dot mean? When running Trunk Pcr (which I love this program) I get a RED (frequency) word sometimes but then it just disappears. What does this mean? I have a PCR 2500-30 USA version if that helps you out.

223. Next version?

Yahoo group: PcrPro
Date: 2009-05-04 14:42:03 UTC
From: Peter
Topic: 223 Message: 223

Hi Jay,
Hope you have managed to fix your Hard Drives after the crash and not too much lost. Just wondered if you had any idea when the next version will be avaialble and if it contains the recorder feature. I am just about to embark on a new project which would use the recorder feature if available shortly, otherwise I will use another option for the intervening period.
Best wishes,
Peter

Hi Peter,

As a matter of fact, this is what I am finishing up...
The recorder is working again and the Timed Recording function is just about done, just have some small things to tidy up on this and the new RR.com SOAP#2 interface...

The next release should be out pretty soon.

Regards,
Jay

The Next Release of TrunkPCR is still being worked on.

I know that I've told a few that the next release would be "in another week" or "pretty soon", but
it seems to turn into a few weeks or more depending on what I find that still needs fixing or the new additions that still need a bit more fine tuning (or life in general tosses me a curve like a new woman in my life last month or like last week when my dad passed away)...

One thing that I just found yesterday is that the AFC function was broken when I tried using it on D-Star and P25 sites. All D-Star functions looks to be complete now and some of the P25 functions need to be finished...

A pretty safe bet now would be to say that it should be out next month :-))

Regards,
Jay

229. PCR Pro version 1.14.258 Now Available

Yahoo group: PcrPro
Date: 2009-06-29 08:32:49 UTC
From: Jay
Topic: 229 Message: 229

PCR Pro version 1.14.258 Now Available for Downloading from homepage:
http://members.cox.net/fiftyone.50/PcrPro/PcrProDwnld.html

This update has a few Additions, Changes and Fixes...

Mar 17,2009 - Added: Pocket Beep Alerts for different functions.
Mar 17,2009 - Fixed: Weather Alerts for 2500's.
Mar 17,2009 - Added: D-Star Support for 2500's.
Displays Current/Last GPS Position using Google Maps...
Mar 18,2009 - Fixed: Dual DTMF Display for 2500's.
Mar 18,2009 - Fixed: Dual DTMF Now Saves to DualDTMF.log.
Mar 18,2009 - Fixed: Associated Windows with Dual Window now close properly.
Mar 19,2009 - -----: Changing COM Port, Doesn't Require Re-Start.
Mar 19,2009 - Fixed: Changing Banks Using Bank Knobs. Caused a Crash in some cases.
Mar 20,2009 - Fixed: Changing Frequency using Freq Knobs now wraps properly at Freq Limits.
Mar 21,2009 - Added: Support for RadioReference.com's CD DataBase.
Mar 22,2009 - Fixed: Setting [Chan] Button after using Freq Knobs.
Mar 22,2009 - Fixed: LastUsed Channel now Saved.
Mar 22,2009 - Fixed: LastUsed Channel now set properly when program starts.
Mar 26,2009 - -----: Frequency Center Indicator now used in DV & P25.
Mar 27,2009 - -----: Volume/Master & Squelch/Monitor Buttons now change to Readable Colors.
Mar 28,2009 - Fixed: DSP Now Set when Changing Channels.
Mar 28,2009 - Fixed: DTMF Now Set when Program Runs.
Mar 28,2009 - Fixed: DTMF Settings now Loaded and Saved.
Mar 29,2009 - Fixed: Squelch Indicator in Dual Receiver.
Mar 29,2009 - Fixed: Dual Receiver's Bank & Channel Knob & Digits when window was Closed, then ReOpened.
Mar 29,2009 - Added: Scan Edge/Level Selection Menus in Dual Receiver.
Mar 29,2009 - Fixed: VFO and Freq Knobs Speed Setting in Main & Dual Receiver.
Mar 30,2009 - Fixed: Bank and Channel Knobs Speed Setting in Main & Dual Receiver.
Mar 31,2009 - Added: DV Digital Squelch Options to Extended Options.
Apr 01,2009 - Added: Adjusted the Width on some Forms where the Caption was cut-off.
Apr 01,2009 - -----: Moved Main & Dual Train settings to Extended Settings.
Apr 15,2009 - Fixed: Setting Weather Alert Channels at Startup.
Apr 15,2009 - -----: Moved PCR-1500/2500 Extended Settings to Each Bank.
Apr 15,2009 - Fixed: Setting NAC and SELECT in Extended Settings.
Apr 16,2009 - Added: Squelch Delay in Extended Settings.
Apr 16,2009 - Fixed: Sending Extended Settings to PCR when Changing Banks.
Apr 22,2009 - Added: Support for RadioReference.com's SOAP2 Database.
Apr 26,2009 - Added: Most Errors are now Saved to the Error.log file.
Apr 28,2009 - -----: Changed how the Sound Recorder Looks and Operates.
May 08,2009 - Fixed: Removed Popping Sound when Recording.
May 13,2009 - Added: Http Proxy Settings for accessing RadioReference.com's SOAP Database.
May 16,2009 - Added: FULL Support for RadioReference.com's SOAP2 Database.
Includes Frequency / CallSign Searches, and Trunk System ID Details.

May 23,2009 - Fixed: AFC Working Again in Both Receivers.
May 23,2009 - -----: AFC Now Enabled by correct Mode & Filter.
May 24,2009 - -----: Spectrum Analyzer Window Position Now Saved.
May 30,2009 - Added: List Displays for P25 Calls with P25 Module.
Jun 01,2009 - Added: Support for RadioReference.com's SOAP Version 3.
Jun 02,2009 - Added: RR.com Web Import's Verify / Compare GroupID's to P25 Lists.
Jun 06,2009 - -----: Users that have Donated $60 or more, Now Get Increased Limits.
Jun 06,2009 - Fixed: ReNaming DStar and P25 Log Files when Bank Name is Changed.
Jun 15,2009 - Added: D-Star Terminal Message now shows a *Green* "OK" if CRC Passed.
Jun 21,2009 - Added: Moved Sound Card Settings/Controls to Audio Menu.
Jun 28,2009 - Fixed: Recording Device now saved correctly in Sound Card Settings.

Version 1.14.258 Released 06/28/2009

Regards,
Jay

From: Jay
Topic: 231 Message: 233

Hey Ron,

You should be able to just install over the existing.

I would recommend backing up your PcrPro.ini & PcrPro.key files, plus your Banks Folder FIRST!
Then do the install of the new version...

Regards,
Jay

Hey Peter,

Yep, I see it...
If you click the up button, it will go to the next to last channel and if you click it once more, it doesn't change.
But if you are at channel 1 and click the down button, it will go to the last channel in the bank...

I'll have this fixed soon :)

Thanks,
Jay

Hey Peter,

The delay you are seeing is probably the program saving banks that have been changed, P25 & DStar info and program settings... Other than that, that should be the only reason...

The Timed Recorder Bank/Channel selection of the Up/Down Buttons is fixed :)
No Date of Release yet, as I am making a few more changes, Fixes and additions...

Regards,
Jay

245. Question Jay

Yahoo group: PcrPro
Date: 2010-02-05 12:38:17 UTC
From: sjinndoawi00
Topic: 245 Message: 245

Morning Jay,

Is there any way to lockout a channel within a bank when scanning a bank? The reason I ask this is that when I am scanning a bank there are some frequencies that I still want to keep in a bank but sometimes I would like to be able to lock them out so they are not scanned but still in the bank. And if I want to scan them all I would have to do is unlock them. These channels would be skipped over in the bank instead of allowed to let the readable signal come in.

Hey Brian,

That would be the same function as the [Scan] Enable Button beneath the Channel Selection...

Maybe I should rename that as [L/Out] instead of [Scan] ???
What do you all think???

Regards,
Jay

Hi Jay,
Works for me either way ... I use the Scan under Channel Selector all
the time.
Since L/Out is the opposite of Scan it would mean reprogramming, right?

What I would really like is lock-out of programmed channels during searches.
Is this possible now or would it be an added function?

Yep it would take a little bit of re-programming, but not much...
Would probably only take a few minutes :-)

Skipping channels during search would be a new function and is on the ToDo list already :-)

From: Brian Veres
Topic: 246 Message: 250

Hello Jay,

It would be nice to see it say(L/Out) but either way is fine now that I know to unclick the scan button with in the channels so it does not scan the channel

Brian

Subject: Re: [PcrPro] Channel LockOut Option? / was :Question Jay

Hey Brian,

That would be the same function as the [Scan] Enable Button beneath the Channel Selection...

Maybe I should rename that as [L/Out] instead of [Scan] ???
What do you all think???

Regards,
Jay

----- Original Message -----

> Morning Jay,
>
> Is there any way to lockout a channel within a bank when scanning a bank? The reason I ask this is that when I am scanning a bank there are some frequencies that I still want to keep in a bank but sometimes I would like to be able to lock them out so they are not scanned but still in the bank. And if I want to scan them all I would have to do is unlock them. These channels would be skipped over in the bank instead of allowed to let the readable signal come in.

251. PCR Pro version 1.14.263 Now Available

Yahoo group: PcrPro
Date: 2010-02-09 04:54:51 UTC
From: Jay
Topic: 251 Message: 251

PCR Pro version 1.14.263 Now Available for Downloading from homepage:
http://members.cox.net/fifty.50/PcrPro/PcrProDwnld.html

This update has a few Additions, Changes and Fixes...

Oct 21,2009 - Fixed: Timed Recorder Didn't disply correct info after Deleting a Selection.
Nov 06,2009 - Added: Support for RadioReference.com's SOAP2 v4, v5 & v6.
Nov 06,2009 - Added: Options Menu -> "Show My Audio Feeds" MenuItem in RadioReference.com's Web Import.
Nov 22,2009 - Added: Error Trapping in Sound Card Settings.
Dec 09,2009 - Fixed: Window Positioning on screens larger than 1280 by 1024.
Dec 23,2009 - Added: Support for RadioReference.com's SOAP2 v7.
Jan 20,2010 - Added: A Bunch More Error Checking and Reporting.
Feb 01,2010 - Fixed: Validation of Sound Devices in Sound Card Settings.
Feb 06,2010 - -----: Changed Bank & Channel Scan Enable Buttons to L/Out.

Version 1.14.263 Released 02/08/2010

Regards,
Jay

252. Thanks

steve

254. RE: [PcrPro] PCR Pro version 1.14.263 Now Available

Yahoo group: PcrPro
Date: 2010-02-10 17:11:49 UTC
From: Peter
Topic: 251 Message: 254

Hi Jay,

I was very pleased to download and go with the new version but a little disappointed that the I couldn't get the recorder to function properly. It could be me or my computer so if it is, please forgive the length of this note.

I will script the actions I took to set up the recorder:

From New start:

1. Menu-audio-timed recorder settings

2. Timed Recorder Settings (Rec 01) appears

3. Date reads 02/10/2010 (Correct US format)

4. Click on date drop down arrow

5. Calendar appears for October 2010 with 2nd highlighted, at bottom of calendar date reads "Today 10/02/2010

6. Calendar will not page back September, August, July etc but will move forward to November, December, January etc

There seems to be some confusion between US and European date formats

Following on:

2a Set single

2b Set time start - 18:00:00

2c Set time stop - 18:30:00

2d Set bank - 01

2e Set channel - 01

2f Set activation - continuous

2g Check Enable

2h Click "Add new selection"

3a As 2a

3b As 2b but 19:00:00

3c As 2c but 19:30:00

3d As 2d but 02

3e As 2e but 02

3f As 2f

3g As 2g

3h As 2h

4a As 2a

4b As 2b but 20:00:00

4c As 2c but 20:30:00

4d As 2d but 03

4e As 2e but 03

4f As 2f

4g As 2g

Three recordings set up, now check by clicking tab Rec 01 All OK

check by clicking tab Rec02
Channel now reads 105

check by clicking tab Rec03 Channel now reads 113

Please note Bank 01 contains 122 records

Bank 02 contains 107 records

Bank 03 contains 113 records

This is a typical set up and the same happens with other examples although
the channel seems to change always to 105 and 113.

Would be grateful for your help.

Best wishes,

Peter

Hey Peter,

Yep, I've seen some issues now and then, but have yet to determine the exact cause... Seems that you can click on the tabs from left to right and all is ok, but if you click from right to left is when weird things happen...

I'll figure it it out eventually...

You can't page back in the calendar since the date has already past.
If you can figure out how to record a frequency in the past, I'd love to hear about it :-)
Maybe you have a DeLorean with a working Flux Capacitor?

Regards,
Jay

Hi Jay,

Maybe I didn't make myself clear.

With the "single" radio button selected this morning the date shown is 12/12/2010. If I try and alter that it defaults immediately to 12/12/2010.

If you then click on the down arrow to the right of the date , the calendar shows up as December 2010 and the date highlighted shows 12 December. However the date at the bottom of the calendar ringed in red shows "Today 12/02/2010"

If you try and go back a month the calendar won't move, but it will go forward.

Peter

Hey Peter,

I don't know how you are getting 12/12/2010 as the "Default", when the Current Month - Day & Year is programmed as the "Default Date" when adding a new Selection???

The Date Time Picker is one of Microsoft's Built-in controls and appears to have some bugs when dealing with XP or newer OS's for some weird reason...

You'll just have to bear with me until I can get this resolved...

Good Morning Jay,

This is getting weird!

I woke at 4.00AM -couldn't sleep so went into the shack to have another look at PCR Pro. Clicked on Timed recorder settings and half asleep saw a new window which said something like "Windows has detected an error in the clock/date function - do you want to attempt to correct it?"

Still half asleep I clicked on "yes" and lo and behold up comes the timer settings with a new calendar and seemingly the correct date. I am now playing around with this and will let you have more details later on. Just thought I'd let you know following your mail.

73's

Peter

Hi again Jay,

OK this is what I've found:

1. The timer/calendar now seem OK but... the recorder now won't switch on even though set.(Previously worked on and off OK)

2. Having set Rec 01 02 03 etc, if you go back to check settings the Bank seems to stay correctly but the channel changes.

3. When first opened up Rec-01 is shown as the first and only tab but if you click on "Insert new selection" an additional Rec-01 tab is shown in addition and carries the same number again if you continue to click "Insert..."

Please don't misunderstand me this is no criticism but hopefully helpful reports to enable complete development of this great program

Best wishes,

Peter

261. Timed Recorder Errors

Yahoo group: PcrPro
Date: 2010-02-15 01:18:58 UTC
From: Jay
Topic: 261 Message: 261

I now have the errors fixed :-)

This is what I did today:
' Feb 14,2010 - Fixed: Changing Tab Descriptions in Timed Recorder when Selection is Inserted or Removed.
' Feb 14,2010 - Fixed: Setting Date Time Picker's Date in Timed Recorder when Changing Tabs.
' Feb 14,2010 - -----: Recording will now Stop when Timed Recorder's Stop Time has been set to a time that has already passed.
' Feb 14,2010 - -----: When Timed Recorder is Recording, Display is now Updated to reflect the Recording Bank & Channel.

Are you sure the "Enable This Recording" was checked? or Maybe the AM or PM wasn't correct? I have made 6 test recordings today and it recorded when the Date and Start Time was triggered...

I'll post the update in another day or two, after I check a few other things :)

Regards,
Jay

Hello again Jay,

No. With radio tuned to a station I go Menu-audio-sound recorder

Then Click Record - Sign comes up in Tuning Block window "Recording"

Click Black Spot to stop recording - sign disappears

But recording counter fails to operate and recording file in Program files reads 1KB and no more -no sound when playing this file.

Hope this makes sense.

Peter

Ok, how about the Squelch? Was it open or closed?
If it was closed, you wouldn't record anything...

When the Recording Pic is shown, then the recording process has started
without any errors...

You do have the Options -> Select PCR Type, set to "Auto" Correct?

The Recording Counter will only increment when the program has detected the
correct Squelch Level...

From: Jay
Topic: 261 Message: 267

The "Select PCR Type" is only selectable when the Power is turned OFF and is applied when the Power is turned back ON...

When the "Auto Set" is greyed out, you need to click the "Options -> Edit Auto Set" Menu To bring up the AutoSet Frequency Editor. If the list is empty, then click the [Defaults] Button to fill the List with the Default Frequency Ranges. The ckeckbox is used to Enable or Disable a Frequency Range...

The "Ext. Speaker" Menu will ONLY be usable for a PCR-100...

The "Verify EEprom and "Tacking Filter" Menus will ONLY be usable for a PCR-1000 or PCR-100 as the 1500's and 2500's do not have that capability...

And the "Clone Radio" Menu is greyed out until I get that part Fully Operational :-)

Sent: 18 February 2010 00:00
To: PcrPro@yahoogroups.com
Subject: Re: [PcrPro] Timed Recorder Errors

The "Select PCR Type" is only selectable when the Power is turned OFF and is applied when the Power is turned back ON...

When the "Auto Set" is greyed out, you need to click the "Options -> Edit Auto Set" Menu To bring up the AutoSet Frequency Editor. If the list is empty, then click the [Defaults] Button to fill the List with the Default Frequency Ranges. The ckeckbox is used to Enable or Disable a Frequency Range...

The "Ext. Speaker" Menu will ONLY be usable for a PCR-100...

The "Verify EEprom and "Tacking Filter" Menus will ONLY be usable for a PCR-1000 or PCR-100 as the 1500's and 2500's do not have that capability...

And the "Clone Radio" Menu is greyed out until I get that part Fully Operational :-)

Regards,

Jay

----- Original Message -----

From: Peter <mailto:peter@...>

OK Jay you got me there. The squelch was set at 25% - so my fault sorry about that.

However the Select PCR type is greyed out as are "Auto set" "Ext speaker" and "Verify eprom"

Also I notice in Menu-Controls "Tracking filter" is also greyed out and in Menu-Extended "Clone radio" is the same.

Hope this is clear.

Best

Peter

From: Jay

Ok, how about the Squelch? Was it open or closed?
If it was closed, you wouldn't record anything...

When the Recording Pic is shown, then the recording process has started
without any errors...

You do have the Options -> Select PCR Type, set to "Auto" Correct?

The Recording Counter will only increment when the program has detected the
correct Squelch Level...

Jay

269. PCR Pro version 1.14.264 Now Available

Yahoo group: PcrPro
Date: 2010-02-23 02:16:49 UTC
From: Jay
Topic: 269 Message: 269

PCR Pro version 1.14.264 Now Available for Downloading from homepage:
http://members.cox.net/fifty.50/PcrPro/PcrProDwnld.html

This update has a One Addition, Three Changes and Two Fixes...

Feb 14,2010 - Fixed: Changing Tab Descriptions in Timed Recorder when Selection is Inserted or Removed.
Feb 14,2010 - Fixed: Setting Date Time Picker's Date in Timed Recorder when Changing Tabs.
Feb 14,2010 - -----: Recording will now Stop when Timed Recorder's Stop Time has been set to a time that has already passed.
Feb 14,2010 - -----: When Timed Recorder is Recording, Display is now Updated to reflect the Recording Bank & Channel.
Feb 15,2010 - -----: Changed how 8.33 Khz Stepping Adjusts Frequecy.
Feb 16,2010 - Added: [Use Current] Button in Timed Recorder that sets the Recording Bank & Channel to the Current Setting.

Version 1.14.264 Released 02/22/2010

Yahoo group: PcrPro
Date: 2010-02-23 22:29:19 UTC
From: Peter
Topic: 269 Message: 273

Hi Jay,

Spent the day trying to get familiar with the recording feature and am still not sure about the Add/insert options, grateful if you could let me know.

Managed to get some successes after a lot of misses; it seems that there is a need to restart the program after using it, but immediately prior to setting up the timers. Once I had realised this I got some successes. However tonight I set up

6 ten-minute recordings at 1900, 1920 and 1940 and at 2100, 2120 and 2140. The 1900-1940 recordings worked perfectly but 2100-2140 just did not work. Is there a temporary limit on the number of recordings that can be set up?

That aside it works just great but I am hoping that there will be a possibility to use up to 9 programmable recordings - can you let me know what happens here?

Thanks for a great program- keep it coming!

Peter

That's pretty easy, Add creates a New Recording Selection to the right side on the Tabs, and Insert creates a New Recording Selection just to the left side of the current Tab...

There are currently a limit of 10 Recordings...

After you check the [x] Enable Recording box, if you didn't get a message saying there was a conflict of recording times, then it should have recorded...

Did the Recording Indicator show up in the display on the 2100-2140 time slots?

Was anything written to the Error.log file?

Thanks,
Jay

HI Peter,

When I installed it, it was actually 1.14.264 as per the "Help About" panel.

However, it did install in a new "PCR Pro" folder. I had to move the new EXE and PcrPro.dll file to the old folder, then all was OK.

You may want to check that.

My text file reads "Version 1.14.264 Released 02/22/2010"

Cheers!

Topic: 269 Message: 277

Hi Jay,

Thanks for the mail. Certainly no indication of a conflict and no indication of anything in the error log. I did watch the initial start up and all seemed OK but left it to run un-attended. So I can only think it was my error in inputting.

I have tried again this morning using 10 timers spaced 1 minute apart and after one run which failed at the 5th and another run which failed at the 7th (again no indication in the error log) I got a perfect 10 on the third run!!

I recalled that during the run last night I did have a look at the scheduled settings (without changing anything) and can only guess that any interference may disrupt the recordings. Thus I have a couple of questions:

1.Once the recording schedules have been set up is it possible to go back and either check or make amendments prior to the start times?

2. After an amendment or edit is it necessary to re-enable?

Apart from this it really does exactly what I need and I hope that any problems I have seen in the last 24 hours can be put down to my errors in inputting!

Best wishes,
peter

Hey Peter,

1) Sure can, as long as the current selection isn't recording, you can change any part of it...

2) Nope, Once enabled, always enabled...

The program has a timer that is triggered every second where it checks all 10 Recording selections (If Enabled), if the current time equals one of the start times, then a recording is started. Same for stopping a Recording...

I'll do some more tests on my end like you have done and see what goes :)

Hi Herbert,

Have you checked your spam folder for messages by me?
I have sent two messages, 1st asking you to send the key file for the donation you sent 3 days ago, 2nd about the
error...

1)
Thank you for sending the Donation :)
Please send the Registration Info (Under the [Menu] Button -> Help Menu) so
that I can create and send out your key file...

2)
Ok, try this as a work around:
Open windows explorer and go to c:\program files\PcrPro, when you are
displaying this folder's contents, right-click in the explorer's right-payne
and create two folders. One named "Banks" and the other "Recordings"...

Let me know how this works...

Regards,
Jay

Yes,

You need to go in to your control panel and change your user permissions... It looks like your current window settings are not allowing programs to create folders or files. A security setting maybe?

Another thing to check is right click on PcrPro.exe to display the Properties Dialog, if there is a Securities Tab there, click on that and change the Files and Folders Permissions to allow PcrPro to have access to those...

295. RE:Recorder problem

Yahoo group: PcrPro
Date: 2010-03-24 14:59:26 UTC
From: Peter
Topic: 290 Message: 295

Hi Jay,

Have come across a strange problem. Recorder seems to be scheduling OK but nearly every time I open up the receiver it shows a recording under way. This is without any recording set ups waiting or even set up. The latest event was just now and in an effort to examine the problem I clicked on menu - audio - timed recorder settings - insert new selection - remove this selection and I was presented with a window which read:

"An error occurred in Modwave - >Save_audio_Data at line 11

Error number : 9 -Subscript out of range

Suppress further errors if possible"

Multiple copies kept opening and I had to press Ctrl Alt Del to stop the process which froze the computer. I rebooted and opened up PCR Pro and the Recording light still showed "Recording". Closed PCR Pro - re-opened it and the "Recording" light had disappeared.

Any ideas?

Kind regards,

Peter

Hi Peter,

Could you check your PcrPro.ini file (created in PCR Pro's install folder), look under the "[TimedRec]" section and see if the Entries shows "Entryxx=True" ? (xx = a number from 00 to 10)...
If one of these entries does show as "True", change it to "False", this will disable the recording for that entry...

The error you are reporting means that the progarm is trying to save a wave file for a particular recording entry, which doesn't exist. Somehow, something got monkeyed up with the count of Recording Entries...

Thanks,
Jay

304. Re:PCR Pro Help File

Yahoo group: PcrPro
Date: 2010-04-08 16:54:26 UTC
From: Tom Brant
Topic: 300 Message: 304

Hello Folks!

Just wanted to say a word about the help file. This is a work in progress, and I need your help.

The PcrPro package is huge both in functionality, and features. I started the help file a few months ago to assist others like myself in the "play and learn" approach. As you will see when you download and open it up, I have designed it to allow a quick user startup. When you click on the main file "PCR Pro.htm", you will see an image of the receiver. When you click on the "Quick start" link, you will be taken to the Quick start control panel. Clicking on any area of the receiver will take you to the page that explains the operation of that area. To return back to the control panel, just click the "go back" link on each page.

Now, here's where I need your help. There are so many features, I was not able to address them, or on some, able to "play and learn" and figure them out.

For example I have a PCR-1500 and a PCR-1000, so, do not have access to the functions available to the '2500.

Please send any help or comments to the site that I set up for them, <mailto:ebrant%40nm2t.net> ebrant@... so I can track them and include them in the final product. I also want to keep track of the folks that help me so I can reach them directly, off page, and give them due credit in the final document.

Cheers all, and thanks in advance for your help.

Tom, NM2T

305. Scan speeds?

Yahoo group: PcrPro
Date: 2010-04-10 09:06:19 UTC
From: Peter
Topic: 305 Message: 305

Hi Jay,

I am trying to understand the scan speed set-up as I think I may have found a problem.

As I understand it there are two essential factors in this:

1. The time delay between frequency scans - the time between moving from one frequency to another, call it T1, and
2. The time spent on each frequency before leaving that frequency to go to another, call it T2

However there seem to be three active controls:

1. Main Panel in the Search/Scan box "Speed" from 2mSec to 254mSec
2. Main Panel in the Search/Scan box "Delay" from 0sec to 30 sec
3. From the Search/Scan box to "Set" sub panel "Resume Delay" from 0 to 10 secs

Could you tell me how these operate?

Best wishes,
Peter

306. Re: [PcrPro] Scan speeds?

Yahoo group: PcrPro
Date: 2010-04-10 18:42:15 UTC
From: Jay
Topic: 305 Message: 306

Hey Peter,

The Search/Scan "Speed" Dial, controls the "T1" interval...

The Search/Scan "Delay" Dial (When Enabled), controls the "T2" Interval...

The "Resume Delay" is an added delay to sample a frequency for a certain period of time after the Squelch Closes, before resuming a Scan/Search... If a conversation continues with-in this "Resume Time", then this loop continues until the Resume Time has passed and the squelch remains closed...

In the Scan Settings, you'll see the [Pause Using Scan Delay] Button, this "Enables" the Search/Scan "Delay" Dial or "T2" interval. If you have the [Pause While Present] Button selected, then the "T2" interval isn't used and the program will wait the Squelch is Closed before resuming a Scan/Search...

Topic: 308 Message: 308

Hello Jay and thanks for the explanation of the spam encroachment! These b-----ds are such a pain!

Also thanks for the scan/search explanation I will look at this again.

Sorry to say there still seems a problem with the timers:

Today 11/04/2010 (11th April 2010)

1. Open program
2. Go to timed settings
3. Date shows as 4/11/2010 (drop down calendar shows November 2010 with 4th "Blue ringed" and "Red ringed at the bottom shows 11/04/2010
4. Set up timer to start on 11/04/2010 - doesn't work
5. Set up timer to start on 04.11.2010 - works

Hope this helps.

Best wishes,

Peter

312. TalkPCR conversion to PcrPro

Yahoo group: PcrPro
Date: 2010-04-13 14:14:33 UTC
From: kc7kmp
Topic: 312 Message: 312

Jay,

How Do I:

- Import a file from TalkPCR (*.fql file)? I have 7-8 Banks with approx. 300 freqs each...

- Set up recording to do this:
- Run a freq-by-freq search through at least 1 bank (preferably more than 1 bank if possible)
- Sample no more than 4 sec if freq is active
- Record the date/time/freq/signal strength in a text/human-readable file

What I do is perform a continuous area survey of the frequencies where I live and generate reports based upon a single file that PcrPro can hopefully provide. I am already doing this on TalkPCR but this program is getting long in the tooth plus I am hoping for better performance (the system is currently a Win2000 box).

Also, any chance of the program being able to run on a Linux system in the future?

Appreciate any help here

Thanks,

- Mark

313. Squelch, Scanning, and Saving

Yahoo group: PcrPro
Date: 2010-04-22 00:57:44 UTC
From: socalsail
Topic: 313 Message: 313

First off thanks for a wonderful product Jay.

I have a question about how squelch behaves when you are scanning. I have a bunch of channels in a bank and I have gone through them channel by channel and set the squelch and volume. Some channels are set with the squelch about 1/4 others about 1/2.

I notice though when I scan and it pauses on a channel sometimes the settings will be way off, for example the squelch up about 1/2 way instead of 1/4 for that channel.

When I hit Hold and then back up to the channel (usually it moves one channel forward or so when I hit hold) the squelch and volume settings are correct. I can also step through the channels with the up/down buttons next to the channel number display and the squelch and volume are correct.

Possibly related I am wonder how you save your changes to both individual channels, I have been using Save under the Organise button, and then saving the bank from the Menu button, it also appears they are saved when you exit PcrPro?

Lastly how does clicking on the Volume control to put it into Master affect all this?

Thanks,

Jon

Hi Mark,

To import a .fql file from TalkPCR, click the [Menu] Button -> File -> Import Bank. Then when the Import Dialog is shown, click the File Menu -> Load TalkPCR .Fql File...

You can do a Recording by "Freq-By-Freq" in One Bank ONLY by using the Sound Recorder manually and have the Report of "Active Freqs" displayed after you click the [Hold] Button. From there, you can either save to a CSV File or Print the Results...

You can run PCR Pro in Linux, under Wine currently :-)

From: Jay
Topic: 313 Message: 315

Hi Jon,

The Squelch Setting is determined my what Mode and Filter is set for each channel. Using the 6khz Filter, the squelch will usually close by the 10 O'Clock Position and 12 O'Clock using the 15Khz Filter...

The [Master] Button underneath the Volume Control, when clicked, will Override the Volume & Squelch setting for each channel. This is all it does...

The [Save] Button under the [Organise] Button will save the current Frequency, Mode & Filter setting to the Current Channel... It won't actuall be written to a ".Bnk" file until below:

The ".Bnk" files are saved anytime there is a change to any of the channels when you Save the Profile or Bank and when the program exits...

Hi Jay,

I have things working much better now. I had created a new bank manually from scratch for the marine VHF channels, I noticed that this bank behaved just as you describe.

I got to looking at the 167 channel bank I imported from RadioReference and one thing I noticed was that the channels giving me problems all had reverse CTCSS Tone Squelch set. I switched this off and things seem much more predictable now.

Speaking of RadioReference and importing, I tried to find the LAX frequencies via the PcrPro import process but could not find them in the dropdowns. The url is http://www.radioreference.com/apps/db/?aid=5824

I finally entered them manually, but I am wondering if either I was doing something wrong or not looking in the right place, or if there is some manual way to get the import location in.

Thanks,

Jon

Hi Jon,

For LAX, Set County to Los Angeles, then click the [Agencies] Button and choose LAX from the System drop-down...

I'll check out the Reverse CTCSS problem...

Jay

From: Brian
Topic: 318 Message: 318

Well Men,

Unfortunately I lost my job today and I must sell this PCR2500, to help make ends meet. It is in mint condition and I still have the box it came along with the other boxes for the cards I have installed. The PCR 2500 comes with the UT-108 (DTMF decoder), UT-122 (APCO25 Digital vocie decoder)and the UT-106 (Notch Filter.) All of these are installed in the PCR2500. There are NO Mods to it it is still in it's original state and RUNS fine. I paid altogether over 1,200.00 dollars for it.
I am asking 850.00 dollars.

Brian

319. Minor probs with Win7

Yahoo group: PcrPro
Date: 2010-05-18 18:51:16 UTC
From: dav1d1uk
Topic: 319 Message: 319

Hi!
I've searched the forum for an answer but I'm unable to find an answer...I'm running win 7 with a PCR100 on an Acer aspire one PCR PRO ver 1.14.265, most things seem to work but I have 2 problems:-
1. The shift/ins doesn't display chn hits but using the menu option is OK
2. I cannot find anyway to reset the channel hits without editing the bank file.
Any help would be appreciated....thanks Dave Lewis.

Yep, just as soon as I can get to it, I will :-)
If your regional settings were the same as mine, there wouldn't be a problem, LOL ;-)

PCR Pro isn't the only program I work on...
Been working on TrunkMON and the BearCat Comm I/O routines the past month as this has been put on hold for a year, so I really need to do some more work on this too...

But, I'll take a look at it in the next day or so...

Hey Dave,

1). Most of the Keyboard shortcuts don't work yet due to the way the Menus are created. This is still on the ToDo List...

2). Click the [Menu] Button -> Edit Menu -> Bank / Channel List, Select the propper Bank, click the "Hits" Column for the channel you want to edit and change to Zero (0)...

Okay, got that part resolved...

Seems that when VB formats a Date using the "Date$ Variable" with the "yyyy/mm/dd" format, you end up with the Day and Month reversed. But when the "Date Variable" is used, it comes out correctly...
NOTE: This is only a problem when your Regional Settings are set to something other than "English - USA"...

Hey Peter,

It could be that you already have a newer version of Microsoft XML installed on your PC. Choosing Ignore is probably the best choice in this situation...

I'm surprised that this is the first time this has happened since I've been using XML Version 3 in the install package for over a year now...

Regards,
Jay

Hi there again,

Sorry to say still seems to be a problem with dates.

Opened this morning as follows:

1. Switch radio on
2. 2.Open up PCR Pro software
3. Go menu-audio-Timed Recording Settings
4. Date shown in Rec 1 as 07/06/2010
5. Click on date - calendar pop-up shows July with blued out date to be
6 July and red ringed Today's date shows 7/6/2010
6. Click on Back arrow in Calendar pop up but will not go back to June

Following your previous comments I changed the date setting on the computer
Regional Settings to US and re ran the above sequence 1,2 and 3 and date
data was corrected, set up 10 timed sequences, but none of them activated.

......help!

Best wishes,
Peter

Date: 2010-06-18 09:14:42 UTC
From: Peter
Topic: 345 Message: 345

Hi Jay,

There still seems to be a problem. I made a set of recordings yesterday and again today and both featured the following:

I have set up Recs 1-9 with 9 sets of data some of which recur every day although I still have the which recur every day although the "Single" selected in every case. So each day I "enable" the apprpropriate Rec or not.

Yesterday I selected Recs 7, 8 and 9 and both 7 and 8 worked fine but 9 did not. Recordings were made for 7 and 8 but not 9
Today I selected 1, 2 and 3 and whilst 1 and 2 were OK 3 did not record.
This is after several sucessful runs.

Any ideas?

Best wishes,
Peter

Topic: 345 Message: 346

I think this is something to do with another program that I somwetimes run in parallel with PCR Pro and as both feature a recording option there is clearly some conflict. However I cannot do a live test till next Tuesday when the same conditions will be evident in terms of frequency and cotent so I will let you know more as soon as I can. In the meantime I will run with only the one recording option in PCR Pro. Sorry to be a pain.
Peter

Date: 2010-06-22 00:45:45 UTC
From: skyknight9
Topic: 348 Message: 348

How can I default the IF, mode (AM,FM etc) in each saved bank so I do not have to adjust all the controls with each frequency I add. I am wanting specific banks for specific frequencies, ie. Bank 1 VHF aircraft freq's, Bank 2 UHF MilAir, and on and on. One other thing, how do you select a bank to scan????

TIA
Bruce

Topic: 348 Message: 352

Hey Bruce,

To Default the Bank settings for each new channel, just set the first channel to the Mode, IF, Volume and Squelch as desired, change the frequency and then click the [Add] Channel Button. This will create a new channel using the Current Frequency and keep the same Settings as the previous...

By default a Bank and Channel are set to "Scan", if you don't want to Scan a certain Bank or Channel, just click the appropriate [L/Out] Button...

Regards,
Jay

Jay

354. How to import frequences from Talk PCR:

Yahoo group: PcrPro
Date: 2010-07-08 15:19:48 UTC
From: Leslie Rogers
Topic: 354 Message: 354

Jay,

You have made a great software interface for the PCR-1000 radio. I have been trying to import my lists from TalkPCR, but I am having some trouble making this work. I would like to get from you a step by step instructions of the steps that are necessary.

I have about 35 groups, with about 225-250 frequencies each ---- and I do not want to have to re-enter these manually.

Thanks
Leslie

355. Re: [PcrPro] How to import frequences from Talk PCR:

Yahoo group: PcrPro

From: Jay
Topic: 354 Message: 355

Hi Leslie,

Simple enough :-)

1) Load the Import Bank Tool by clicking the [Menu] Button -> File -> Import Bank.
2) From the Import Bank Tool, Click the File Menu -> Load TalkPcr .FQL File.
3) Ignore the Error for now (I'll have an update posted in a few days)...
4) After you have loaded a fql file, click the Bank in the List on the Left to display the channels.
5) Right-Click on the Bank in the List and "Select All Channels".
6) Right-Click on the Bank in the List and choose your Import Option, Add or Inser a New Bank.

If you click the [Import All Selected Channels] Button, this will copy the Selected Channels to the Current Bank...

Regards,
Jay

Topic: 356 Message: 356

MUST sell all equipment I would like to sell as a package. This package includes,
1.) ICOM PCR 2500 Communication Receiver installed with (UT-122) P-25 card,(UT-106) DSP Receive Unit and (UT-108) DTMF card. I have the software as well as the manual and the original boxes the unit came shipped in. In "mint condition"
2.) Ramsey Speech Scrambler/Descrambler (Factory Assembled.) I have the original box it shipped in, the power adaptor as well as the manual. In "mint condition"
3.) Optoelectronics "Digital Scout." I have the original box it shipped in. As well as the OptoSuite Pro software, Power cord and the interface cable to the computer. In "mint condition"
4.) Jim Professional Series (M-75) Pre-Amplifier with Variable gain. I have the manual and power cord. In "mint condition"
5.) Motorola "XTN series" radio. I have the base charger, power cord, and holster. In "mint condition"
6.) RHS1000 (75-1750 MHz) antenna kit, this is a Diamond antenna kit, very hard to come by. I have the case as well as the manual. In "mint condition"
7.) Omni-directional "desktop" discone antenna. Comes with the tool to take out leads if needed. In mint condition.
8.) Assorted BNC connectors, Radio Shack mono speaker, 100ft RG 8X cable (Never use) a few different antennas and a MFJ -1720c switcher.
I have pictures if you want to see anything. I am asking $1,500.00 for everything. I will pay shipping.
Please feel free to contact me if interested.

Topic: 358 Message: 359

Hey Peter,

Understand about your occasional problem, but until I can duplicate it or an error report shows where it's happening, I can't do too much about it...

Recording individual frequencies or channels during scanning or searching is on the ToDo List, but not anytime soon...

Regards,
Jay

I have been tearing my hair out most of today, with trying to get my Icom ICR1500 receiver to work with the Icom software and the bundled Bonita software, on my newly purchased copy of Windows 7 - running on my Apple MacBook Pro using parallels VM.

I eventually stumbled upon someone that recommended your software. I downloaded it.....and it was easy as pie - all I had to do was show it a port, and it was up and running !!!!! I couldn't believe how easy it was to get going, compared to the other stuff.

Well done Jay, good job

Hi Jay,

I just discovered the "web import" function in the lastest version of PCR Pro, and signed up with Radio Reference so
I could use it. When I brought up the RR Import screen I was able to log in and start entering data. I got as far as the
County field and then got the error shown below. I clicked Yes to supress further errors and was able to import frequencies
into PCR Pro ok. Thought you might like to know, and THANKS for this neat feature! BTW I'm running Windows 7 64.

Regards,
Mike R.

Hi Mike,

Yep, that will happen once in awhile from the SOAP client that I am using to access RR.com. Sometimes it will report an error while still waiting for a resonse from the server, eventhough it still downloads the correct data... I'll see if I can increase the time-out interval in that...

Thanks,
Jay

Hi Dave,

Sorry for the delay, had to reorganize my radios, coax and power cables so I could verify this...

But anywho, nope, your not missing anything...

That short delay is inherent to the PCR's internal scan function. After the squelch closes, the PCR will notify the program that it's ok to switch to the next frequency after it determines that a conversation has ended... There isn't any setting that shortens this delay...

Regards,
Jay

Hi Jay!
Thanks for the reply, just for information only I used to use TalkPcr before switching to PcrPro and I'm sure you could set the delay to zero but I can live with the way it is ..... while searching for a way to do what I wanted, I may have changed some settings that I don't know about. I'm sure the search function has worked OK in the past, but now it doesn't save any frequencies that have audio but does when just noise is present ..... can you suggest anything? I've tried uninstall and re-install and it's just the same.
Thanks Dave.

Topic: 365 Message: 370

Hi Dave,

TalkPCR wasn't created by me, so my programs behave differently from it. It uses commands that are specific to the PCR-100 and PCR-1000 which are not available in the PCR-1500 & PCR-2500. It samples the Signal Level in the normal way plus using the *Alignement Section's* Signal level, when either of these two reaches zero(0), it will resume scanning/searching.

My programs use the Scan Resume command that is sent from *ALL* PCR's, which is the reason for the short delay. This will stop on active freqs caused by voice, data or noise...

If you are just searching for new frequencies, have you tried the Spectrum Sweep Tool yet?
Menu Button -> Options -> Spectrum Sweep. This will search a range of frequencies and will save found freqs based on a signal level greater than zero and does not have any delay at all...

Regards,
Jay

> Hi Jay!
> Thanks for the reply, just for information only I used to use TalkPcr before switching to PcrPro and I'm sure you could set the delay to zero but I can live with the way it is ..... while searching for a way to do what I wanted, I may have changed some settings that I don't know about. I'm sure the search function has worked OK in the past, but now it doesn't save any frequencies that have audio but does when just noise is present ..... can you suggest anything? I've tried uninstall and re-install and it's just the same.

371. Radio Not Responding

Yahoo group: PcrPro
Date: 2010-11-13 21:33:07 UTC
From: tszipfel
Topic: 371 Message: 371

Hi All,

I hadn't used the radio for a couple of months, so I updated to the 274 software and turned everything on. Only I keep getting the Radio Not Responding error message.
I checked all the settings and cables, tried changing COM Ports, cycling the power, nothing. So I uninstalled the software and reinstalled with 269, still not responding. I then uninstalled the Silicon Labs USB drivers and reinstalled with the latest version (6.1), still not responding.
The COM Port shows up in device manager and the USB connection is established, as it's using around 40% of the CPU cycles.
Anybody have any ideas?

Thanks,
Tim

Hi Tim,

Is the COM Port that shows up in device manager the same that you sre using in PCR Pro?
Have you rebooted your computer after reinstalling the Silicon Labs USB drivers?

Hi Jay,

The COM Port is the same in Device Manager and PCR Pro. I rebooted several times after reinstalling the Silicon Labs USB drivers.

To check that it's a hardware problem with the radio and not the computer (Win 7), I loaded the new drivers and the PCR Pro software on my laptop (Vista) and used a different USB cable. It does the same thing. Guess I have a brick.

Hmmm, ok, have you tried running Icom's program first?

If you click the "Bank" label in the main display, that will bring up the debugger. do you see any activity in there? you can click the [x] Save checkbox to save the info and send to my email address...

Probably not bricked, just stubborn, lol...

Thanks,
Jay

Hi,

Uninstall all versions of the Silicon Laboratories CP210x drivers. Also remove the Silabs folder that is located on one of the Program Files directories.

Now install version 4.4 of the same that can be found here.
http://dl.dropbox.com/u/12632944/VCP_v4.40.zip
This is what I am using under Win7 64 with the PCR2500.

Topic: 377 Message: 377

Jay,

Wow, looks like you really know, and love, these receivers. I own a "blocked" r-9500 and find myself using my "unblocked" r-2500 because it is so simple, other than HF where a solid VFO feels best. I'm looking to install my r-2500 at a remote location and monitor and use it via the internet on my laptop wherever I am. What is the simplest way to accomplish this?

73,

Hi,

I was looking at the Icom USB driver installation manual and says it needs a driver with the "CP210x USB to UART Bridge Controller" name and the new version of the drivers has "Silicon Labs CP210x USB to UART Bridge Controller." So I tried to downgrade the drivers.

The uninstaller left files scattered everywhere. Even after removing the Silicon Labs folder from Program Files, Windows instisted that I had a never version of the drivers (6.1) installed. I ended up deleting all the Silicon Labs files from the Windows/System32/drivers folder and forcing an install of the Icom drivers (4.40.10).

I have other things that use the Silicon Labs USB to UART chips, so I must have upgraded the drivers since the last time I used the radio.

Thanks,
Tim

http://members.cox.net/fifty.50/PcrPro/PcrProDwnld.html

This update has Four Fixes...

Oct 08,2010 - Fixed: Auto-Set Freq Ranges Editing now set properly.
Oct 08,2010 - Fixed: Added Missing ToolTips in Auto-Set Frequency Editor.
Dec 05,2010 - Fixed: CSV File Import's Default Channel values.
Jan 06,2011 - Fixed: Changing/Editing Wave Format in Timed Recorder.

Version 1.14.276 Released 01/07/2011

Regards,
Jay

383. Error: 339 Component 'COMDLG32.OCX

Yahoo group: PcrPro
Date: 2011-03-04 09:48:02 UTC
From: rmdir42
Topic: 383 Message: 383

I have installed the latest PCR Pro at a system running Vista 64 Ultimate.

Upon starting the program, the following error meassage is written into the log:

"MainModule-> Main at Line: 237, Error: 339 -> Component 'COMDLG32.OCX' or one of its dependencies not correctly registered: a file is missing or invalid"

I have, using regsvr32, successfully re-registered the COMDLG32.OCX files in both the system32 and the sysWOW64 directories, but the error remains.

Help to resolve this would be appreciated.

Regards
/Patrick

Hi Jay, thanks for your reply!

I used the installer as it is a new install, and did install from a local admin account, also selcting Run-as-admin when starting the installer.

The error appears when after install starting the PcrPro application in user mode as well as in admin mode.

I viewed a start of PcrPro in Procmon, which produced a tremendous lot of data. What I assume as relevant is that PcrPro first looked for COMDLG32.OCX in PcrPro's home directory with no success, then in the system directory where the file was indeed found and also read.

I also found PcrPro did a number of attempts to find a file vb6sv.dll which was not found and do not exist on the system.

Btw, the version of COMDLGL32.OCX on the system is 6.1.98.16, the file is reported as signed by MS.

Regards
/Patrick

Did you download PCR Pro from
http://members.cox.net/fifty.50/PcrPro/PcrProDwnld.html ???

vb6sv.dll is NOT INCLUDED in the Install Package and does not exist on my pc, nor is it used by any of the other dll's or ocx's used by PCR Pro...

The COMDLG32.OCX verson I show is 6.01.9816, this ocx is needed by the main program and should be in the "C:\windows\system\" or "C:\windows\system32\" folder...

Me thinks something fishy is going on...

Jay

Yes, I downloaded from your site. The MD5 checksum of the downloaded archive file is:
543e83fc6c04be2d40a4267227784091

Yes, I did restart and have restarted many times since then.

The version of the file seems to be the same, just number differently formatted.

The file exists in both system32 and SysWOW64 directories.

Fishy indeed, I agree.

From: Gilles
Topic: 392 Message: 392

Good Morning

I would like to find out about how you go and set the search banks on the sub receiver.

I am interested in setting some ranges using the main receiver because of the higher frequency range and using the sub receiver fro the lower receiver.

At this point, I cannot set any search bank on the sub receiver.
The SW version I am running is the 1.14.276

Thanks in advance

Gilles

Topic: 392 Message: 393

Hi Gilles,

Looks like I need to tidy up some code for the SUB Receiver...
When selecting/editing from the SUB, it's changing the MAIN instead. After I received the 2500 and added the SUB Display (which was a copy of the MAIN Display), some of the references of the controls were set to the Main on accident...

I'll go over the Search and Quick Channels code and make the correct changes. Should have an update out in a few days...

Thanks for catching this,
Jay

Hey All,

Long time reader..1st time poster.

I have been using PCR Pro for a bit now and I do much prefer it over ICOMs software.

One thing I noticed is if I try to use my wireless (USB) headphones with PCR Pro the software will not allow me to use the audio from the radio by way of its usb data. (Read NO audio connected to my line in on the sound card) And also output the radios audio to my wireless headphones. However the ICOM software does!

Am I making a huge blunder in setting PCR Pro to do this or is this another of ICOMs little gotchas that they foist on aftermarket developers?

Note after using the ICOM software as described I shut it off and start PCR Pro but it outputs nothing until I reconnect the audio cable from the radio to the line in jack. Then the only audio I hear comes from the speakers or a hardwired set of headphones in the headphone jack of the soundcard. ???

Thank,

Curt

Topic: 394 Message: 395

Hi Curt,

The USB Audio from the PCR 1500/2500 can not be adjusted at this time. ICom has hidden the device for normal use through the Windows Volume settings. As soon as I can "Un-Hide" these devices, I can add the support to my programs...

Regards,
Jay

399. EPROM corruption?

Yahoo group: PcrPro
Date: 2011-04-05 07:41:25 UTC
From: radioman12342004
Topic: 399 Message: 399

Does the PcrPro software have the ability to corrupt the eprom on the following Icom scanners?
PCR-1000
PCR-1500
IC-R2500
The reason I am asking is that I had the experience of trying out some other software and corrupted the eprom on the PCR-1000, which then needed to go back to ICOM for repair at considerable cost.
I have since never trusted other after market software but have run in to a problem of not being able to run the Icom software for both the PCR-1500 and the IC-2500 simultaniously. Works ok if I run one using PcrPro but have concerns if eprom corruption can occur with this software.

Well, I can vouch for my programs NOT being able to do that :-)

The old problem of EEprom Corruption with the PCR-1000's was caused by some early third party programs that tried to write too much data to the PCR too fast. That's why Icom has that statement on their site about third party programs.

I even have "speed governors" in place to prevent such problems...
After 9 years and 1,000+ users later, I'm sure they can testify to that fact :)

Regards,
Jay

403. PCR Pro version 1.14.278 Now Available

Yahoo group: PcrPro
Date: 2011-04-20 20:11:54 UTC
From: Jay
Topic: 403 Message: 403

PCR Pro version 1.14.278 Now Available for Downloading from homepage:
http://members.cox.net/fifty.50/PcrPro/PcrProDwnld.html

This update has Mine(9) Fixes, Four(4) Additions and Eight(8) Changes...

Apr 07,2011 - Fixed: Disabling Search Banks when Spectrum Sweep
Activated.
Apr 09,2011 - Added: Search Bank Editor for Dual Receiver.
Apr 10,2011 - Fixed: Loading/Saving Search Banks in Dual Receiver.
Apr 10,2011 - Fixed: Loading/Saving QuickChannels in Dual Receiver.
Apr 10,2011 - Fixed: Loading/Saving PriorityChans in Dual Receiver.
Apr 13,2011 - -----: Changed Memory Management of QuickChannels to
support Dual Receiver.
Apr 13,2011 - Added: Priority Channel Editor for Dual Receiver.
Apr 14,2011 - -----: Dual Receiver now has it's own Priority Channel
Settings.
Apr 14,2011 - Fixed: Setting the Quick Channel ToolTips in the Dual
Receiver.
Apr 16,2011 - Fixed: Displaying Correct Step Frequency when Selecting a
Quick Channel.
Apr 16,2011 - -----: When Selecting a Quick Channel, the Volume, Squelch
& I.F. Shift are Now Set according to the Volume/Master.
Apr 16,2011 - Added: Dual Channel Selector.
Apr 17,2011 - -----: If the Main Rcvr is set for Sweeping, then the Dual
Rcvr is too (If Active).
Apr 17,2011 - -----: LSB, USB, CW, DV and P25 Modes disabled in Dual
Receiver.
Apr 17,2011 - -----: 2.8 Khz Filter disabled in Dual Receiver.
Apr 17,2011 - Fixed: Loading/Saving Spectrum Sweep Settings in Dual
Receiver.
Apr 17,2011 - Fixed: Setting Volume in Dual Receiver when displayed.
Apr 18,2011 - Fixed: Spectrum Sweep in Dual Receiver.
Apr 18,2011 - -----: Lower Frequency Limit for Dual Receiver now Set to
50.0 mhz.
Apr 18,2011 - Added: Dual DTMF Setup Dialog.
Apr 19,2011 - -----: Removed VFO Search Buttons, They were Left Overs
from PcrPro1k.

Version 1.14.278 Released 04/20/2011

Jay

404. This may seem a silly question....How do i autostore found frequencies?

Yahoo group: PcrPro
Date: 2011-04-30 12:46:10 UTC
From: pete22192000
Topic: 404 Message: 404

Hi guys,
I'm in the UK, I have a PCR1000 & I have recently picked up scanning again...mainly airband.

Like I say...this may seem a silly question to you guys...

How, in PCPro, do I autostore frequencies found during a search?
Is this possible?

Any help with this would be appreciated.

Best regards,
Pete

Topic: 404 Message: 405

Hi Pete,

There isn't any type of "Auto Store" built into PCR Pro...

After you complete a search and clicking the [Hold] Button, a list of newly found frequencies will be displayed in a list. From there, you can import the selected frequencies into a Bank...

The reason for this is because of the channel limits per bank. If there were an AutoStore and a user is running in "demo" mode or "Low Donation Level", then the new found frequencies can fill up a Bank rather quickly. This way, the new freqs are stored to a temp area where you can choose what freqs are saved in a Bank. It prevents birdies and other false hits to be saved...

Regards,
Jay

Hi Jay,
thank you very much for your prompt reply.

Thank you for explaining the HOLD button operation and how I can use this to save the frequencies.

Also, thanks for writing & supporting such a brilliant piece of software. I am currently using your PcrPro program in demo mode only because I haven't yet made a donation.....though i expect to do so soon.

Best regards,
Pete

407. Frequency imprint

Yahoo group: PcrPro
Date: 2011-05-07 14:49:33 UTC
From: Peter
Topic: 407 Message: 407

Hi Jay, All well with the latest version and running well.

However I wonder if you have anything in the pipeline that may help me.

I am running around 35 Banks of around 40 frequencies each and as most of the activity I am seeking is random timings I use the scan bank facility along with a recorder or with the PCR recorder.

However it would be great if I had an imprint of the frequency being covered in the playback. The only way I can tell the frequency is by adding a channel with a known frequency and marking that channel with a CW tone, and then counting the channels from the marker. Not really very accurate although it does work. If the recording showed the frequency of the channel it would save a lot of time and trouble.

Do you have any plans to add such a facility?

Best wishes from an unusually warm and dry April in UK,

Peter

Eventually, I'll have the recording working for each channel/frequency when they become active and possibly a log of the recordings. The filename will have the timestamp of when the recording started and the Bank & Channel or Frequency...

But I don't see this happening for at least a few months down the road...

Regards,
Jay

Hi Kevin,

Yep, that stands to reason about to record or not ;-)
Each Channel will have a flag to determine that and each Bank will have a flag to record (or Not), active frequencies found during a search...

Oops, PCR Pro only has the 19 maximum...

The extended Search Banks are available in TrunkPCR. Looks like the last time I updated the Donation Screen (From TrunkPCR), I copied that over to PCR Pro too without making the changes to that dialog...

Do you already have all 19 in use now?

Regards,
Jay

416. AFC Freq Update

Yahoo group: PcrPro
Date: 2011-06-05 16:00:54 UTC
From: bb_2001bb
Topic: 416 Message: 416

Hi Jay,

When the AFC adjusts the frequency it doesn't seem to update the Main display, only when I hover over one of the rotary tuners and roll my mouse button does the displayed frequency jump to the one set by the AFC.

It does updates the small display in the Memory Banks section correctly.

TrunkPCR also exhibits the same issue with the selectable "Frequency Selector".

I'm new to PRCPRo so forgive me if I missed something.

Regards
Paul

Thanks Jay,

2 other small anomalies while I am at it:)

In the bandscope window the "Follow Active Frequencies" doesn't allow the red line to be pulled down more than about 40% from the top, in TrunkPCR it can be set allot lower.

The Menu > File > Save Bank key Shortcut (Shift F6) Doesn't work - The Menu option works perfect but not the Shift F6.

Is PrcPro still being feature developed? I would love to be able to directly enter a frequency with the keypad.

I have some Channel scan Features/Filters I would love to see.

Best Regards
Paul

Hmmm, I'll take a look at the "Follow Active Frequencies", thougt that was okay...

Yep, most of the keyboard shortcuts shown on the PopUp Menu don't work because it's not an Active Menu (shown all of the time). I'll get around to fixing those sooner or later :)

What kind of Channel scan Features/Filters ???

Yes, PrcPro is still being feature developed when I have the time :)

Thanks,
Jay

Thanks Again Jay,

While using the band scope it would really helpful if I could mark the birdies with a different color, like the way "Identify Known Frequencies" works but with a different color.
While I think about it maybe the BandScope could also reflect a channels LockOut status.

I would like to be able to set a time when a channel should be
scanned or not scanned

I would like to be able to set a target multiple and have an incremental counter skipping the scan on non multiple counts on a per channel basis.

I could probably find a few more ideas but ill leave it there for now.

I downloaded the mini source code and am going to have a play and see what I can do.

Best Regards
Paul

421. Recording Problem?

Yahoo group: PcrPro
Date: 2011-06-12 22:28:21 UTC
From: Kevin
Topic: 421 Message: 421

Hi Jay
I've successfully used the recorder before being controlled by the squelch.
I sometimes had the problem described below and sometines it worked OK.
I thort it was me or something intermittent, now I know why.

I just wanted to record 2 frequencies and had the following problem or is it normal?

I open the program so that it comes up with the HOLD selected and on the channel I want to record.
The recorder works OK.

If I SCAN 2 channels the RECORDER starts but does not stop.
If I close the RECORDER and open it again for a new recording, I hit Record and it does not stop.
The same thing happens if I open the program with the HOLD on and change the channel manually.
So I have to close the program and open it again with the HOLD on & on the channel I want to record.
I am using version 1.14.276
I hope you understand what I am reporting.
Tnx Kevin Phx Az

Hi Kevin,

The problem is that PCR Pro isn't programmed for Recording while Scanning,
so that is why you are having mixed results...

I should be able to start on that in the next month :)

Regards,
Jay

From: nedsez
Topic: 424 Message: 424

Hi from Nedsez. Loaded PcrPro a couple of days ago It sure is a super program.
My only prob is trying to install PcrProHelpB1.zip from the files store on this site.
Can anyone please help me with a step by step procedure to get this working?

All the Very Best
Nedsez

425. Re: [PcrPro] Trouble trying to install PcrProHelpB1.zip from the files store on this site

Yahoo group: PcrPro
Date: 2011-08-22 20:13:36 UTC
From: Jay
Topic: 425 Message: 425

Hi Nedsez,

1) After downloading PcrProHelpB1.zip, extract the zip file to a folder (ex: "C:\Program Files\PcrPro\").

2) A folder should have been created called "PCR Pro_files" that contains a bunch of htm, jpg and png files...

3) A file called "PCR Pro.htm" will be saved in the folder in step #1...

That's all that is needed to "Install" the help file. To view it, just double-click the "PCR Pro.htm" file to view...

Regards,
Jay

426. Problems with Start-up

Yahoo group: PcrPro
Date: 2011-10-07 13:32:48 UTC
From: Peter
Topic: 426 Message: 426

After working perfectly well for some 12 months or so my PCR 1500 won't start up. What is the exact sequence of events.Is it boot up computer, open PCR software, Switch on PCR1500 or some other sequence?

Also the software is only finding Com1 all the others are marked "not used"

Any help very welcome,

Regards to all,
Peter

Hi Peter,

The preferred boot sequence is:
1) Turn on PC
2) Turn on PCR
3) Open PCR software

Does your 1500 still work with Icoms' program?
Did you install a new USB device recently that might conflict with Icom's USB Driver?

Regards,
Jay

Hi Jay,

Nope this doesn't do the trick.

I downloaded from ICOMUK CD 287901-010.and put this into a folder named ICOM Software.

The downloaded file contains -Driver CP210x\VCPlus installer.exe and

-PCR 1500 2500 installation
software

I ran the driver file which removed the old driver and re-installed the new one and rebooted.

Still not finding any ports except Com 1.

What do you suggest next?

Regards,

Peter

You have not said what OS you are running.
Your best bet for an up to date driver and one designed for the OS you are running, I suggest you just search the net for CP210X and look for the download from Silicon Valley. I did this and located a driver for the 1500 (CP210X) although I am not running my 1500 right now.

This should work.

From: Jay
Topic: 437 Message: 437

Hi All,

I received an email today from my ISP, they will be dropping their Free Web Hosting services, so it looks like I'll have to find a new home for my site...

They will be dropping it on December 6, 2011...
So after then, the www.members.cox.com links will be no good.

I'll let you all know where the new site is as soon as I can find a new home :)

Regards,
Jay

Not sure if this is still the case but if you have the bandscope on that is what turns the audio off.

The USB audio device in the radio is set up as an Output USB Audio device for no reason but Windows will automatically set new USB Audio devices as the default device. Right-Clicking the speakers then clicking Playback Devices then find and click the correct output device, chose Set Default. Windows will then remember this setting but remember that Windows considers which port it is plugged into when identifying devices so it will likely have to be done again if you use a different USB port. (but it should remember that one too if you change the default again)

I usually disable the created "Speakers, USB Audio CODEC" device under Playback since it cannot be used as a playback device anyhow and rename the USB Audio CODEC device under Recording to easily identify it.

From: sergio18@btinternet.com
Topic: 446 Message: 446

using pcrpro with my pcr1000 and getting a lot of interference from 50mhz to 500mhz if i select wide fm i can hear freeview channels. only way to get any sort of decent reception is to use the tracking filter.this also happens on my handheld scanner.could someone near me be using a transmitter of some sort in their house?.any ideas?????

If you are getting the interference on both the PCR and a handheld, then there is definitely something close to you causing this...
This could be from an AM or FM radio tower or even a Ham/CB station if they are running high power.
One thing to do is take off the antenna from your handheld and hold it horizontally next to you standing up, then turn slowly in a complete 360 degree circle and see if it's stronger in a certain direction. If you find that the signal is stronger in one direction, then seek it out :)

Jay

From: Mr Gilles Monette
Topic: 446 Message: 448

Hi Jay

Just a quick one.
Love the program by the way.

Do you have a way of creating a search list such that the list will be
 skipped when you search or scan?
This way, if you have known channels or frequency you don,t want, it will not be logged in the list.

Thanks

Hi Jay

Another question
Do you have a way of putting name to a frequency?
I do amateur radio, it would be nice to associate a repeater name to a frequency when I do a scan/search
or even a spectrum sweep.

Thanks

Topic: 446 Message: 450

The Skipped Frequency List is still on the ToDo List.
This would be applied to Searches Only...

To skip unwanted channels during Scanning, use the Channel Lock-Out option.

Jay

Yep, it's called Adding a Channel with the Frequency in mind and changing it's description :)

Normal Search Results and Search Results using the Spectrum Sweep will always show the frequency, not an associated Bank/Channel, if one exists...

Jay

You should move the existing EeBackUp.dat file to a safe folder if you want to save it for comparison to the new, otherwise, just delete it.
When you get your PCR-1000 back, just run the EEprom Backup again and save your new EeBackUp.dat file...

No reason to uninstall PcrPRO...

What did you do to corrupt your eeprom???

Regards,
Jay

Yep, some programs try to send as many commands to the PCR's as fast as they can, but that is a *BAD Thing*. Trying to do that will make the PCR-1000 hiccup and cause the corruption... Good thing my programs have "Speed Governors" just to prevent that :)

Some programs released in that past year may not know of this overrun condition?

458. Serial to USB adapter

Yahoo group: PcrPro
Date: 2012-01-23 01:19:17 UTC
From: daffydz
Topic: 458 Message: 458

I am trying to get my pcr1k to work on my Vista 64 machine
My USB adapter is a sabrent sbt-usc6m that is working according to the device manager.
My port settings are default for the com port, com9.

PCRPro v1.14.280 sees the comport but when I hit the power on the PCRPro I see "radio not responding check com port", when I check the comport com 9 is no longer green
I was getting "error 8020 error reading comm device" but last time i tried it I didn't see that msg for some reason.

Icom's software revision 2.2 reports "communications failed" But actually works other than the signal meter doing nothing.

HRD seems to have full function but crashes the computer after 10 minutes or so, Blue screen, Multiple IRP complete requests.

I checked for a later driver on Sabrents site but the one I have is the latest I can find. 3.3.2.102.

Any idea what the problem is?

Thanks

Most Likely is that your driver is at fault.
With all the programs reporting a communications problem, it's a seems that your driver for your USB-to-Serial device isn't working for Vista 64...

Have you tried running the programs in XP Compatibility Mode?

Okay, very strange...

PCR Pro has been working solidly on my Win95,Win98,WinME,Win2k and WinXP systems for like forever...

Since this is the first time this has been ever reported, I must conclude that it's something on your Win7 setup...

If the [LIMIT] indicator isn't showing, then there is NO Reason for it NOT to function as it should...

What is the BandScope Span set to? It should be at least set to 5 times the Step Rate...

Regards,
Jay

From: ronrobinson6
Topic: 475 Message: 475

Jay I did not no where to contact you so I'll go through the yahoo group.I lost my receiver banks but was able to restore some. The biggest problem I face is that pcrpro reverted back to demo mode. When I run the program the first thing that appears is the registration window even though I have allready donated. After I close the register window the program runs in demo mode and when I close the app window it comes up with the donate screen. Could you please help me out I am really missing my radio controll.

Hi Ron,

Did you delete or rename the PcrPro.key file or have you installed some other windows components recently?

479. Unable to set up PCR1500

Yahoo group: PcrPro
Date: 2012-03-14 22:48:31 UTC
From: Peter
Topic: 479 Message: 479

It's me again with the same problems!

I am completely at a loss to understand what is happening. I have just had my receiver back from ICOM after I sent it for a thorough check-up and I am told that it runs perfectly. However I cannot get it to work on any one of three PC's here.

Firstly the computers won't recognise the receiver with the Add New Hardware Wizard so I have had to try and load it though the control panel without any success.

It would be a great help if someone could tell me the exact procedure and order in which various drivers/programmes should be loaded and also which drivers and programmes, as there seem to be some differences between ICOM UK and ICOM Japan. I am running primarily a Dell Precision 380 with Pentium 4 2GB RAM and XP Professional SP3. Same problems with Dell Optiplex GX320 Pentium 4 2GB RAM and XP Professional SP3 and Dell Latitude Pentium 3 with 512MB RAM on XP home Edition SP3

All and any help would be much appreciated.

Regards to All,

Peter

From: Jay
Topic: 479 Message: 480

If the 1500 is working at Icom, then I would suspect your USB Cable or Power Adapter.
If you do not hear what I call the "Da Donk" sound when the Power Button on the front of the PCR is switched ON, then I would replace the USB cable and check the voltage on the power adapter. The driver does not need to be installed to verify that...

The way I have heard best to install the PCR's drivers and Software is:
1) Connect the USB cable to your PC.
2) Turn ON the Power Switch on the front of the PCR.
3) When windows recognises the New Hardware, cancel the install New Hardware Found Wizard.
4) Insert the ICom CD or run the Install Software if downloaded.
5) Install the driver first from this Install Program.
6) Install the ICom Program...

If your USB Cable and Power Adapter is good, the program would work at this point...

From: Peter
Topic: 479 Message: 481

Jay, you've nailed it!!!

When all else fails "Look for the bleedin' obvious"!!!!!!!!!!!!!!!!

I changed the USB cable many times and did find one some way back that was faulty. However the problem still persisted. When I looked at your mail I realised that the only thing I hadn't checked was the Power Supply. Way back I had bought a regulated DC Power supply which was supposed to stop interference with the radios. This worked but it must have been around that time that my problems started. Now I look at this power pack it is marked Max 14.4VA whereas the spec for the ICOM unit is 15VA. I simply replaced the regulated pack with the original and BINGO it works.

Many thanks indeed Jay and please excuse my stupidity.

Best wishes as usual,

Peter

482. PCR Pro version 1.14.281 Now Available

Yahoo group: PcrPro
Date: 2012-06-01 02:07:31 UTC
From: Jay
Topic: 482 Message: 482

PCR Pro version 1.14.281 Now Available for Downloading from the NEW Homepage:
http://www.fiftyonefiftysystems.com/PcrPro/PcrProDwnld.html

This update has One Fix and Two Additions...

Mar 15,2012 - Fixed: OverFlow Error in COM Routines.
May 26,2012 - Added: Monitor CTS in Main COM Port Selector.
May 26,2012 - Added: Ignore CTS/Monitor CTS in Dual COM Port Selector.

Version 1.14.281 Released 05/31/2012

IMPORTANT: If you have Upgraded ICom's Program to Version 2.20, then you will need
to Check the [Ignore CTS] CheckBox in the COM Port Selector BEFORE Clicking the
[Power] Button...

Regards,
Jay

483. PcrPro 'Feedback' and Questions

Yahoo group: PcrPro
Date: 2012-10-12 16:03:46 UTC
From: phil_w2lie
Topic: 483 Message: 483

Hi Jay,
I haven't used PcrPro much since my only PCR radio was dedicated to PCR-Server/Remote

I now have a replacement PCR-1000 back on PCR-Server, and I have another PCR-1500 that I am going to dedicate to PCR-Pro.

A quick piece of feedback - the nag screen to register (donate) to the software constantly comes up on my computer. I can understand when the software starts and stops, and maybe every xx minutes during operation, but it is constantly coming up on my pc. Only installed for a single day, and already nagging me ;) This is installed on my laptop for now to test and this computer won't be the final UI for the PCR-Pro, so I don't want to lock my registration on here.

Now for my questions and bugs:

I imported my county from Radio Reference. I noticed that the CTCSS tones are imported as "reversed" and not normal. Doesn't this cause the ctcss tone to be ignored? I noticed the same problem with PCR-Server and assumed someone maliciously changed my settings via the remote interface. That doesn't seem to be the case I guess. If you are interested, it is Nassau County, NY.

Does PcrPro support Trunking? I see I can import trunk systems. If so, would the setup be the same as TrunkPCR, and if so, does that mean TrunkPCR is built into PcrPro? (use packet data to line in) When trying to monitor my EDACS system, the PCR-1500 just stopped on the data channel.

Is there a need/way to backup the eeprom for the 1500 ?

When the description is too long from a Radio Reference import, I can't import the data. This is a small problem for me because of the convention used in my area to label frequenices in the RR Database. A full description is easier. Anyway to increase the text length in the import? (again, Nassau County, NY)

Finally, any plans on supporting the nation wide frequencies that is in the RR database? I'm looking for the National Interop frequencies. The next presidential debate is 20 minutes from my house, so I would love to use the fast scan speed of the PCR1500 combined with the spectrum sweeps to try and located some new frequencies.

Thanks again, and when I move the PCR to my final PC, I'll be sending over some more $$. Your software rocks! (or , if you will let me move my license over to my final pc, I'll register now on the temp laptop)

Hi Phil,

I don't see how the donation popup is constantly on, it has a 20 minute timer that is only activated once when the program has started if a valid key file has'nt been found...

Q's and Bug:
1.) Fixed. Wow! I'm surprised that no one else reported that, that was a left over after adding the PCR-2500 support...

2.) Trunking systems can be imported for those users who want to scan their frequencies only.
The Trunking Decoder is not used in PCR Pro...

3.) Nope, the 1500/2500 doesn't have the capability to Read/Save the EEprom...

4.) You can use a MAXimum of 60 characters for the Channel Description, eventhough you can't display them all in the Main Window. You can Choose the Different Options in the Verify Channels Dialog to show different descriptions...

5.) The National Interoperability frequencies would be found when you just click [United States] as the Country and leave the State as [>>> Select State <<<]...

Thanks,
Jay

Jay,
Thanks for the info and the fixes.

And the pop-up isn't constantly on, but it seems that it doesn't stop the 20 minute timer after you quit using PCRPro. I'll come back to my computer after a few hours and have several 'nag' screens.

Today should be the last time I see the nag. I'm going to register my laptop for a low amount so I can use the PCR-1500 on the go, and then register my desktop computer for a higher license.

For the laptop, just send the RegInfo and I'll send a new key :-)

I'll reply to the rest later on after review...

487. Learning Curve

Yahoo group: PcrPro
Date: 2012-10-23 04:01:10 UTC
From: kb6qxm
Topic: 487 Message: 487

All,

I have finally had the time to install PCRPro on my Win7-64 bit machine. I am pretty tech saavy, but for some reason, I cannot figure out how to add scanner channels, edit the list or other edit functions. The application acts if it is locked to edits.

The registration text file is hidden and locked.

I like the feature set of the application, except that the user interface is not intuitive in my opinion. I downloaded the help manual and as far as the menu portion, the document was incomplete and not finished.

I tried to input my channel .csv file, but that also did not work.

I really like the application features over the lame Icom software for my PCR1500, but the learning curve for the channel/frequency additions is frustrating. If someone can assist, please contact me offline.

Thank you,

488. Re: [PcrPro] Learning Curve

Yahoo group: PcrPro

From: Jay
Topic: 487 Message: 488

To add Channels, tune to a frequency and click the [Add] Button beneath the Channel Display (Lower Middle Right of the Main Display).

Which list are you trying to Edit and How?
What other Edit Functions?

If the RegInfo text file is hidden and locked, that might be a Windows 7 security setting?
Normally it's not hidden and not locked...

The help file is the beginning of what one of our users have started, you and other users can always improve on it :-)

You can either send me the csv file or post it to the group's file section for review to see what's up.

Once you find the [Add] Buttons beneath the Bank and Channel section in the Main Display, that learning curve will be easier :-)

Regards,
Jay

Hi Marty,

I am the author of PCR Pro, I just did a google search for "PcrPro" and the first link was to the group and the 2nd link is for the current homepage :-)

I show nothing in my records for a donation or registration info from "Marty Schmidt" or kd7erz...

And yes, I still do support my programs...

A Key File is sent after a propper donation has been made.

Regards,
Jay

Hello Jay, What is the best way to use paypal to send you a donation on one of the propram I will use on my prc 1000 unit, What I understand both proprams you wrote will work on the prc 1500/2500.

Hi Marty,

As I replied on the TrunkPCR group, the best way is to use the PayPal Donate Button on the homepage or send directly to crazycalifornian at hotmail dot com in $10 increments :-)

Besides TrunkPCR and PCR Pro, there is also PCR Remote and PCR Mini...

From: Jay
Topic: 496 Message: 496

Hi all,

For those that have had a "Out of Stack Space" Error, I found some info as to why this is happening. Good news is that it is fixable, but will take some time going through the program and making changes in about 90% of the procedures. I will also be going through TrunkPCR and updating that too, so hopefully if time permits, there will be an update in a few months :-)

Regards,
Jay

Hi Robert,

This group is the right place to report bugs or feature requests :-)

Pcr Pro already has a Direct Frequency Input, there is a TextBox in the lower middle of the Main Display where you can enter a frequency, or you can just press 0 - 9 or Decimal Point (".") on your keyboard...

As far as the DataBase or CSV editing goes, you can change each channels settings by the [Menu] Button -> Edit -> Bank / Channel List and Double-Click any item you wish to change...

You can also use the [Menu] Button -> File -> CSV Import to import Banks from Other Scanner Programs...

I think creating "How To" Flash Videos would be a great help to new users or old timers who need a refresher :)

Regards,
Jay

----- Original Message -----
from: Robert Costa, KB6QXM

Jay,

Is there a formal process to report bugs or to make UI/feature requests?

I think PCR PRO is a nice program, but in my opinion the user interface could use some improvements. Direct frequency input, database or csv direct parameter editing.

I want to offer my assistance/help with the documentation and the "how to" with the application. I can make training programs in Flash and upload them to YouTube or give them to Jay to post to his website.

I fully stand behind Jay's efforts. PCR pro is the only game in town besides ICOM's program. You can get Ham Radio deluxe to work with it, but it is more than you need and has a large learning curve.

Again, thank you Jay for all of your effort.

73,
Robert

The answer is simpler than you might think ;-)

On the bottom of the Main Display, you will see two [L/Out] Buttons, one
under the Bank Section and the other under the Channel Section.

When these Buttons are Pushed In, the Current Bank/Channel is Locked Out,
when the Button is Normal, then they are Selected for Scanning...

In the past three days I have had some spare time to work on this and it looks like it may finally be fixed :-)
The fix has been running now in TrunkPCR for the past few hours using the Spectrum Sweep and no errors.
I'll do some more tests this weekend and if it all looks good, then I'll add the fixes to PCR Pro and post an update within the next week...

Regards,
Jay

From: Jay
Topic: 503 Message: 503

PCR Pro version 1.14.282 Now Available for Downloading from the Homepage:
http://www.fiftyonefiftysystems.com/PcrPro/PcrProDwnld.html

This update has Seven Fixes and Two Additions...

Oct 12,2012 - Fixed: Setting CTCSS Tone Option as Normal instead of
Reverse
when Importing a Bank from RadioReference Web
Import.
Oct 12,2012 - Fixed: Changed link on PayPal picture in Donation Popup.
Oct 12,2012 - Added: RadioReference.com v10 update. (Bug Fix)
Dec 15,2012 - Fixed: Stack OverFlow Error #28 in COM Routines.
Dec 16,2012 - Fixed: RR Web Import Can Now Use Revisions 4 to 9.
Dec 16,2012 - Fixed: Wrong Frequency Displayed When Started with AFC ON.
Dec 16,2012 - Fixed: Setting BandScope Step in Quick Channels.
Dec 17,2012 - Added: Short-Cut Key Strokes Now Work From Keyboard.
Dec 17,2012 - Fixed: Error in Spectrum Sweep Print after Canceling.

Version 1.14.282 Released 12/18/2012

IMPORTANT: If you have Upgraded ICom's Program to Version 2.20, then you
will need
to Check the [Ignore CTS] CheckBox in the COM Port Selector BEFORE Clicking
the
[Power] Button...

Regards,
Jay

Topic: 505 Message: 507

Hi Jay and Hawk,

I've seen this problem in W2K.

I think, since 2K is no longer supported, the update site is gone.

Fear not though, a manual search should yield a download of the final service pack from Microsoft.

I run 2K on "Virtual Box". Unfortunately, I can't test my theory since I can't get "VBox" to support add-on serial ports. (yet?)

However, I suggest updating to the latest service pack.

My 2K install is V5.00.2195, Service pack 4.

Cheers!

Tom

508. PCR Pro sticking

Yahoo group: PcrPro
Date: 2013-05-08 13:29:50 UTC
From: Peter
Topic: 508 Message: 508

My PCR has developed an annoying feature. In the middle of a scan it stops on a frequency and will not start again until I click the scan button.

This also happens when I am running the radio and a Vox2File digital recorder and try to start up another program. I can understand this may be due to overloading the system but surely it shouldn't happened when I am running an unattended scan?

Any thoughts?

Best wishes to all,
Peter

Hi Peter,

Sounds like you either found a birdie or a frequency that is active.

When this happens, is the BUSY Indicator active or any signal showing on the Signal Meter?
If so, then the only way to resume scanning is by clicking the Scan Button again or by changing the Resume Condidtion (Click the SET Button in Search / Scan) ...

Hi Jay and thanks for the mail.

There is no "Busy" indicator showing and no signal being received. This is confirmed by the recordings I am making at the time.

The strange thing is that this has only recently started to happen so I guess it must be computer related rather than radio, unless you have any other ideas?

Grateful for your advice.

By the way what plans do you have for the software? Apart from this problem it is still working well for my purposes.

Topic: 508 Message: 514

Okay, so it's just stopping for no apparent reason, like the Hold Button got pressed?
This is really an odd behavior, no idea at the moment what could cause this...
Is this happening on your PCR-1500?

Plans for the future are to finish the Clone Option for the 2500 that will allow a user to transfer channels to/from PCR Pro from/to the 2500's internal memory that is used from the Control Head during mobile operation.

Another option is to add a "Surveillance" Mode so a user can record a frequency/channel and log the date/time when a frequency/channel becomes active. This feature will only be active if the donation level is above a certain value, (like maybe 50 to 75)...
I have received a few emails in the past from a P.I., Police Detective and a few others requesting something to help aide their operations...

You might have to go through the registry and delete all references to CP210x in order to re-install.

Which version did you have installed?

Hi Paul,

I use XP too on a desktop and laptop and my HP and Microsoft wheel mice work just fine...

Are you sure you have the correct wheel mouse driver installed and your mouse settings are set for a wheel mouse and not a standard mouse?

What about your remote desktop settings? Have you verified that other apps work with the remote desktop and wheel mouse?

Thanks,
Jay

534. Icom R2500/PCR2500 for sale

Yahoo group: PcrPro
Date: 2014-01-15 16:21:22 UTC
From: <richard.morris@...>
Topic: 534 Message: 534

I have a IC-R2500/PCR2500 with the 3 big options installed.

UT-106 DSP UNIT
Provides noise reduction and auto notch functions.
UT-118 D-STAR DIGITAL UNIT
Provides D-STAR DV mode reception. Either UT-108 or UT-118 can be installed in the receiver.
UT-122 P25 DIGITAL UNIT
Provides APCO P25 digital mode reception

I still have the original box as well as all the manuals, remote control head and cables.

It is in original shape, no scratches, no damage and works perfectly.
p.s. this has no blocked out frequencies, it is straight through coverage from bottom to top.
Also included will be my copy of PCRPro and TrunkPCR with my registration key.

Not cheap, but worth it. $1500.00 US, payment needs to be through PayPal (same email address)
If you need to see it, I could put a video of it on youtube.com

Send an email to richard.morris@...

541. ICOM PCR 1500

Yahoo group: PcrPro
Date: 2014-07-03 11:41:38 UTC
From: Peter
Topic: 541 Message: 541

In desperation I am sending this mail in the hope that somewhere, someone will be able to restore my faith in a unit which has, until recently, operated successfully for the past 5 years.,

Some months back, my receiver, for no apparent reason ceased to provide any audio. It was returned to ICOM who checked it, replaced a transistor in the Squelch circuit and returned the unit.

2-3 weeks back, the same problem recurred. The unit was again returned to ICOM who checked it out, advised me that it was working fine and returned it to me. I tried everything to get it working again but failed and returned the

unit again to ICOM. They found that the squelch circuit was again the source of the problem, replaced a transistor and returned it to me.

IICOM also mailed me the links for the latest software.

I followed the ICOM Installation notes (Windows 7 notes in the absence of XP) as far as possible up to point 10 on page 6. (I have an XP Professional SP3 32 bit computer). At point 10 the driver did not appear in the Device

Manager nor did it start an automatic install.

So, I turned to the computers "add hardware" routine and eventually got it to see and install CP210x. However, this was accompanied by a yellow warning icon and a" Code 10" error showing up. Also the Device Manager

showed the connection to Port 8 not Port 3 as originally configured. Along the way it was also mentioned that "this device may not function correctly"

I should add that up until this point ICOM have been very helpful but have not yet come up with a solution.

Any suggestions or hints would be very welcome!

Regards to all,

Peter

Hi Peter,

Did Icom say which transistor they replaced (other than it's in the squelch circuit)?

It sounds like there is another bad part in your radio that could cause the transistor they replaced to go bad. For that same part to go bad twice, you would think they'd trouble-shoot a bit further as to why it keeps failing.

In my experience in the past, when ever there is one part that fails, there is usually another part that causes it...

Hi Jay,

I think you are right, they should have back-tracked beyond the damaged component particularly as it seems to have happened again!!

Here are their comments:

The squelch control transistor (that send the on/off voltage to the audio amp chip), had got too hot and had failed. Some of the tracking on the pcb had also got heat damaged and was peeling away from the pcb substrate.

This transistor was replaced by us before earlier this year, so evidently it is in heavy use.

I have re-shaped the aluminium screening plate to push down on this transistor and have applied silicon heat conductive paste, the combined effect will be to dissipate the excess heat from the device, and stop the thermal runaway that destroyed the previous 2 transistors.

Also as a belt and braces, I have introduced a wirewound 4.7 ohm resistor between the transistor o/p and the +ve supply to the AF chip, this will reduce the maximum current and hence also reduce the heat.

Regards,

Peter

PS I am going to send it back once more lets see!

For that transistor to get SO HOT to lift traces from the circuit board is definately a sign of over current/voltage...

Looking at the service manual, it could be Q5/Q8 (8 Volt regulator) that controls Q12 (speaker mute)?

But in any event, TELL them to troubleshoot it further and monitor it for a couple of days before sending it back to you...

Hi All,

I've been working on the Clone Operation feature over the past few weeks and have the 2500 operation almost finished. I am in need of some screen captures of Icom's program from the PCR-1500 users so I can complete that side or to see what is different...

So if you have a PCR-1500 and have a few minutes to take some screen captures from Icom's program Clone Operation, I'd really appreciate it :-)

Many thanks,
Jay

Hi George,

Welcome to the group :-)

The latest version of PCR Pro (1.14.284) can be downloaded from the Homepage:
http://www.fiftyonefiftysystems.com/PcrPro/PcrProDwnld.html

I am in the process of updating the program, plus more bug fixes and should have it posted in the next couple of weeks...

If you click the [Menu] Button, -> Help -> About, you will see which version you have.

Best Regards,
Jay

I am trying to find my way with this and have some questions ....

When I bring up the "Radio" front panel on my computer ,I get in the following order .....

Version Box .... in my case ..... V 1-14-281

Registration Info

Radio front panel

Donations .... when I click on this I am told not to do this at moment

On the Radio front panel this is all I get

Also I can find NO instructions for operation of the Radio

ANY HELP with the above would be very much appreciated

Thank you George

Hi George,

For help on using PCR Pro, you'll have to search / read the messages on this list.

If there is something not covered that you have a question about, please post your questions here...

Build # 283 is the latest release.

If you haven't sent a donation yet, then there isn't any reason to send the Registration Info (That's what the one message is saying).

What is it that you need help on?

Regards,
Jay

Hi Ron,

You'll need to install Icom's software first if you are using a PCR-1500/2500, then install PCR PRo...

The key files are PC Specific, meaning that they will only work on the PC that they are created for. Just send me the new Registration Info for the new PC after you get PCR Pro installed and I'll send you a new key file for that...

Jay

569. PCR Pro version 1.15.285 Now Available

Yahoo group: PcrPro
Date: 2014-12-23 23:10:36 UTC
From: Jay
Topic: 569 Message: 569

PCR Pro version 1.15.285 Now Available for Downloading from the Homepage:
http://www.fiftyonefiftysystems.com/PcrPro/PcrProDwnld.html

This update has 10 Fixes, 8 Additions and 7 Changes...

Aug 09,2014 - Fixed: Initilaizing D-Star & P-25 Dialogs.
Aug 09,2014 - Fixed: D-Star - Decoding a new NMEA Message Format.
Aug 21,2014 - Fixed: D-Star - Reporting Emergency Status.
Aug 21,2014 - Fixed: D-Star - Displaying Lat & Lon Coordinates of UnKnown Caller.
Aug 27,2014 - Fixed: Bug in Comm Routines for Commands with length > 5.
Aug 30,2014 - -----: D-Star "EMR" and "BRK" Messages now Shown Correctly.
Aug 30,2014 - -----: D-Star Caller Status "UR?" and "RPT UP" now Shown.
Sep 16,2014 - Fixed: CTCSS/Dual CTCSS Search for PCR-1500/2500.
Sep 17,2014 - Added: Dual Squelch Display Status.
Sep 23,2014 - Fixed: DTMF now Enabled for Main Receiver on a 2500.
Sep 23,2014 - Fixed: Using DTMF on 1500/2500.
Sep 23,2014 - Added: About Dialog now shows if Dual DTMF is Installed on a 2500.
Sep 24,2014 - Fixed: Saving Dialog Window Position when Closing and Minimized.
Sep 24,2014 - Added: Clear Current History function to Main & Dual DTMF Display.
Sep 24,2014 - -----: Increased Main & Dual DTMF Display to 12 Characters.
Sep 25,2014 - -----: CTCSS and DTCS Searches will Now Only Work when in Manual Mode.
Sep 25,2014 - -----: Scan Resume Now Sets DTCS Tone from Current Channel.
Nov 03,2014 - Fixed: The DV Callsign Was Appended to Itself Each Time The Bank was
Switched.
This Created a Long String of Text that was Sent to the PCR, Causing a
BIG Delay while Scanning as the String Kept On Growing.
Nov 10,2014 - Added: Registration Information Can Now Be Copied to the ClipBoard for
Pasting.
Nov 12,2014 - Added: Clone Operation For PCR-1500 & PCR-2500.
Nov 16,2014 - Added: D-Star Messages Now Shown in Main Display.
Nov 18,2014 - Added: Duration of D-Star Message Display Setting (1 to 60 Seconds) After
Call Ends.
Nov 22,2014 - -----: Changed COM Port Initializing / Startup.
Nov 22,2014 - Added: Detection of USB Power Failure for PCR-1500/2500.
Dec 04,2014 - -----: In COM Port Settings, "RAISE DTR" MUST BE Enabled for PCR 1500/2500
Cloning!

Version 1.15.285 Released 12/23/2014

IMPORTANT: If you have Upgraded ICom's Driver to Version 2.20, then you will need
to Check the [Ignore CTS] CheckBox in the COM Port Selector BEFORE Clicking the
[Power] Button...

583. PCR-1500 Cloning

Yahoo group: PcrPro
Date: 2015-05-15 00:54:55 UTC
From: socalsail@...
Topic: 583 Message: 583

Hi Jay,

I am trying to get cloning working with my ICR-1500. Basically I appear to be able to add channels and start the cloning by clicking Clone, Send to Radio.

The progress bar appears and quickly jumps to 51% then I get one short beep from the radio. After that the progress bar slowly increases (about 3 mins) to 91% when I get four longer beeps from the radio. Then the progress bar continues slowly to 100% but never disappears.

After awhile, once 15 minutes, I click the black X to close the cloning window, but nothing appears to have been transferred to the radio.

Things I have tried/found out...

Originally the clone screen was coming up PCR-2500 I found that Select Type of PCR was set to Auto Detect, I changed this to PCR-1500 and now I get the PCR-1500 clone form, though the comments still say PCR-2500.

Sometimes the physical display of the ICR-1500 shows cleared when I power it on after trying to clone, making me think it is at least trying to work.

I tried 9600, 38400, and full com port speeds with no apparent change. I don't know in general if there is a best recommended COM port setup.

All I am trying to do is load channels from PcrPro to the radio in case of a fire or something and I need to grab the radio and go.

Any help is greatly appreciated.

Jon

Hi Jay,
Computer is Win 7 Home Premium SP 1 with all current patches and I am using ICOM USB cable.

On Clone read I get this:

Immediate short beep.
Progress bar scrolls normally.
At about 74% second short beep and progress bar jumps to 91%

After that I get Reading Clone Memory Completed" message and when I click ok I get this error.

PCR Pro Error - An Error Occured in FrmClone -> Display_Other at Line: 18
Error number 380 - Invalid property value
Suppress Further Errors If Possible?

If I click ok I get back to clone form, but I don't believe I am seeing any data from the radio. I only have one channel programmed in the radio currently, so a bit hard to be sure.

588. Re: [PcrPro] PCR-1500 Cloning

Yahoo group: PcrPro
Date: 2015-05-17 00:24:18 UTC
From: Jay
Topic: 583 Message: 588

Hi Jon,

Thanks for checking...

The COM Port settings wouldn't matter. The PCR-1500/2500's initial Baud Rate is set to 38,400 after the radio is turned on by PCR Pro and remains at that setting for the Clone Operation too. It it were a COM Port settings error, the incomplete Read/Write operation would fail much sooner...

The only thing I can think of at the moment, would be that I might need to change the delay time when the Clone Data Packets are Sent/Received. My testing has been done with Windows XP, so on Windows 7 or newer, it might need to process that a bit slower...

On another note, I have found the problems with not showing "PCR-1500" in the Tree List and the bug when reading fails "PCR Pro Error - An Error Occured in FrmClone -> Display_Other at Line: 18". That was due to an incomplete read, so some values were not in a valid range. I'll add some code to correct this if a "read" fails again in the future...

I should have an update out in the next week...

Thanks again,
Jay

----- Original Message -----From: socalsail@

Hi Jay,

I tried the ICOM software and I don't get any errors. I only created a single channel, but it appeared to transfer that to and from the radio ok.

I keep wondering about COM port settings, speed flow control, and such.

Jon

Hmmm, been really busy lately. Had to spend awhile going through 60 boxes of stuff looking for the manuals, documents and other papers for my Quicksilver MX Ultralight that I'm getting ready to sell and also found some other stuff that I haven't seen in 20 years that I've been going through and checking out...

I'll get it out eventually :-)

Hi Brent,

Anytime you upgrade Windows, the Product ID changes and when upgrading from Win7 to Win8 to Win10, the Product Name changes...

The key file has the Product ID and Product Name encoded within so ANYTIME that info changes, PCR Pro will inform you of the change...

Where is this registration web page that you speak of??? There NEVER has been one...
All that you need to do is send me your Updated Registration Info and I'll send you a new key file, easy as that :)

Jay

Hi Jay,

After some 5weeks at ICOM I finally have my PCR 1500 back again. They say that the memory was completely scrambled , but how this came about is a mystery. The unit is working again but I cannot seem to get the scan delay working properly.

For example I set it to a 1 second delay but get a 2 to 2.5 second delay in practice. I am using version 1.15.286 still with an XP based computer Any suggestions?

Best wishes,

Peter

Hi Peter,

The Scan Delay is set using a system timer that's controlled by Windows.
On my Windows XP PC, it's still working like it is supposed to...

I'll keep an eye on this and see if it changes sometime.

That's strange how your 1500's memory got scrambled, did they give any clue as to why that might have happened?

Thanks for the report,
Jay

596. Windows 10 and Mousewheel

Yahoo group: PcrPro
Date: 2015-08-26 21:05:02 UTC
From: socalsail@...
Topic: 596 Message: 596

Hi All,

I upgraded to Windows 10 and the good news is scanning seems faster and smoother, but I have noted one odd thing.

I used to use the mouse wheel to change settings like volume, VFO, squelch, etc. Now in Windows 10 I can mouse over the control and the up/down arrow keys will change it, or clicking with the mousse, but the mouse wheel does not.

The mouse wheel does work from scrolling in other other apps like Explorer, Notepad, etc so it doesn't seem to be a general issue.

Just wondering if anyone else is seeing this or if it is unique to me.

Jon

Topic: 597 Message: 597

Hi Jay,

Would appreciate some help with the following:

I am at a complete loss to understand and solve a problem with the driver. I have been using the same system successfully for some while, but for no apparent reason the driver (Com Port 3) has now disappeared and I am unable to find a solution to restore it. My computer is a DELL Precision 380 32 bit X86 running Windows XP.

I have tried to reinstall using CP210xVCP Installer_x86.exe version 2.1.0.0 but this comes up with "Installation Failed"

I only have a basic knowledge of computers and would be very grateful if you could offer a possible solution to resolve this problem.

Best wishes,

Peter

Hi Peter,

Have you tried a complete un-install of Icom's program and driver first and then doing a complete re-install from Icom's Installer?

Is the PCR Turned ON during the re-install?
Have you tried swapping the USB cable to see if that changes?
Do you hear the "Da-Donk" sound when the PCR is turned ON?

Hello Peter

Are you using the software as described at
http://www.icom.co.jp/world/support/download/firm/index.html and

http://www.icom.co.jp/world/support/download/firm/index.html for
the PCR1500 ?

I currently have it installed on an older Dell XP laptop and a Win 7
desktop unit now, but I am considering installing it on a more capable Win
10 desktop also.

Both the XP and Win7 units are working OK, and I assume it should also with
Win 10, but have not done it as yet.

What are the issues you are having when running Win 10 ?

Denny - K0LGI -

Hi Peter,

I sent out a few messages to users who are using WIndows 10 with a PCR-1500/2500 and received about 8 replies so far. Out of those 8 users, only one had a problem but was fixed by either a test driver or Control Panel setting, but not sure which. The other 7 users had NO problem whatsoever when migrating from XP or Win7 to Win10.

I'm thinking that the problem may be due to an incompatible Bios / Motherboard with the CP210x USB Driver used by the PCR-1500/2500's...

Hi Jay and thanks for the mail.

I have two computers - a desktop with XP which is not performing 100% and a Laptop with Windows 10 so the only hope is that I get the laptop to work but Silabs seems to indicate that until a new driver is released there is not much chance of success. However I wonder what the "test driver" has to offer or is this the one where Silabs are waiting on Microsoft? I am more or less resigned to a long wait!!

Best wishes,

Peter

611. Help!

Yahoo group: PcrPro
Date: 2016-05-19 22:44:25 UTC
From: thurloar@...
Topic: 611 Message: 611

Hi,

Jay, I could not find an e-mail address for you and the message system on your web site was down.

I hope that you do not find my enquiry too frustrating!!I am familiar with SWL but have now been given an ICOM PCR-1000 to play with. To control this I have discovered your PCRPRO software - note that I have not tried the original ICOM software, nor have I any real experience using a handheld scanner.

I am somewhat lost -

* How does a profile differ from a bank?
* What is the duplex setting for?
* What is 'Channel Hits'?
* What is Edit AutoSet for?

Perhaps what I need is some basic scanner tuition. Do you know of a website that can provide this.

Anyway once I get hold of a better antenna then that bundled with the receiver I will look to 'donate'. That leads me to another set of questions - sorry.

* What do max group and radio IDs mean.
* what does search limit banks and max search results mean?

Many thanks

Topic: 611 Message: 612

Hi,

A "Profile" is a file that contains all info pertaing to your Scan Banks and Radio Settings, a "Bank" conatins all Channel Info that has the Settings of the Radio for Each Frequency.

Duplex is used to monitor communications where there are two frequencies used, one person will use one frequency to list on and another frequency to talk on.

Channel Hits is a counter for how many times a Channel / Frequency becomes active / listened to.

The AutoSet pre-defines Channel settings for a particular Frequency Range. Edit aloows you to change this.

Max Group and Radio ID's are used in Trunking Only. (I Should probably remove this from PCR Pro's screen)...

Search Limit Banks are Banks where the Start and End Frequencies will be searched...

I'd say, search Google on "How to Use Your Scanner" ;-)

In the future, search the PCR Pro yahoo groups Messages as a lot of questions have been asked and answered many times in the past. If you find something not covered, then please ask away...

Regards,
Jay

Topic: 620 Message: 620

Jay

Been a long time since I used my TrunkPCR program.

I am still using version .87.229 on Windows 98 program.

How recent of a Windows program will the newest version 1.00.292 TrunkPCR operate on?

While using win 98 will I be able to Update or will I have to Reinstall when moving to your most recent version?

Can I still use my old product key you provided?

Thank You

Gary Williams

Topic: 620 Message: 621

Hi Gary,

Eventhough you sent your message on the PCR Pro group, the same holds true :-)

TrunkPCR and PCR Pro work fine if using Windows 95 or up to Windows 10.

All that's needed is to back-up the whole Program Folder with all the Sub-Folders, then copy those back after you install a newer operating system.

Since you will be upgrading to a new OS, the Key File will no longer work as it's generated using the info for the older Windows OS. All that's needed here is for you to send me the NEW Registration Information after you have installed your new Windows OS and run the PCR Pro or TrunkPCR program (It will advise you of the change.) After I receive your new Registration Info, I'll create and send out your new Key File...

Regards,
Jay

Jay

Been a long time since I used my TrunkPCR program.

I am still using version .87.229 on Windows 98 program.

How recent of a Windows program will the newest version 1.00.292 TrunkPCR operate on?

While using win 98 will I be able to Update or will I have to Reinstall when moving to your most recent version?

Can I still use my old product key you provided?

Thank You

Gary Williams

622. Software for IC-PCR100 anywhere ?

I used PCR Pro some time back and found it to be an excellent program far and away better than the ICOM version which I found to be useless, don't know if Jay Bray is still around but he was very helpful if any problems arose.

Address at https://fiftyonefiftysystems.com
<https://fiftyonefiftysystems.com/> should find the site,

Hi Mike,

There isn't a manual, but it should be pretty easy to navigate.
Click the buttons and see what they do :-)

If you have a question, check the messages here on the group first and if you find something unclear, go ahead and ask away...

Regards,
Jay

Yesterday I learned that our Icom representative in Canada, Eric Meth (ve3ei) had passed away on April 4th of this year.
He was a good friend and also the guy who hosted my web sites for the past 6 years, thank you Eric.

So now I'll have to find a new free web hosting service :-(

Regards,
Jay

From: PcrPro@yahoogroups.com
Topic: 641 Message: 641

There has been some confusion regarding Donations and the Use of Key Files, this document should clarify a few things.

The Total Donation Amount a User Sends determines how many Key Files they will Receive.
A Total Donation of $10 to $30 entitles the User to Receive Three (3) Key Files.
A Total Donation of $40 entitles the User to Receive Four (4) Key Files.
A Total Donation of $50 entitles the User to Receive Five (5) Key Files.

The Total Donation Amount accumulates for Any Donation Made for My Programs.

I Allow Three (3) Key File Updates within a 6 Month Period.

Key Files are issued to a User for Their Personal PC's or Work PC's, NOT a Friend's PC.

A Single Key File will ONLY Work on ONE (1) PC, NOT Multiple PC's...

Key Files Are NOT Transferable...

Jay L. Bray

NO CONTROL!!!
I have computers running Microsoft with the choice selected NOT to do AUTOMATIC updates.
Of course MS ignores that setting and updates anyway and one is not even made aware of it until as often happens something goes wrong, with previously working programs ,after the update.
I tried unplugging the AC power source overnite..

NO UPDATE of course until I powered up and then it just merrily updated while I waited to see what would not work this time!!!

Jay, Are you still taking donations through Paypal for the key files? Used the Paypal button on your form and it sent me to Toyota to buy a Prius... Not that I wouldn't like a Prius but it might be a bit more than a donation to you would be. Could you check and see if I have used up my three key files? I had to go back from Win 10 to Win 7 and, of course, need a new key file.
Thanks.

Hi Brent,

You haven't sent in a new registartion request in the past 12 months, so you are good for 3 more updates.

PayPal Donations can still be made directly using crazycalifornian@... as the email address...

Regards,
Jay
